Re: Oconee Unit 2
Docket No. 50-270

Dear Mr. Giambusso:

On December 13, 1974, the annual inspection of Oconee Unit 2 Reactor Building was completed, pursuant to Technical Specification 4.1.1.4. The inspection was performed in accordance with approved test procedure PT/O/A/0150/16, Reactor Building Inspection Test.

A visual examination was made of accessible interior and exterior surfaces of the containment structure and its components. The following are discrepancies found during the inspection:

1. Tendon grease seepage through construction joints was observed at three exterior locations on the Reactor Building. The test procedure is being revised to require inspection of these areas on an annual basis.
2. Several tendon grease caps were found to have grease leakage around caps and filler plugs. The grease caps are being repaired by applying a sealant tape to the grease plug threads and re-torquing the bolts.

From this inspection no evidence of deterioration was found which could affect the containment's structural integrity or leak tightness.

Very truly yours,

A. C. Thies
