

JUN 03 1977

MEMORANDUM FOR: Karl R. Goller, Assistant Director for Operating Reactors, DOR

FROM: Brian K. Grimes, Chief, Environmental Evaluation Branch, DOR

SUBJECT: FOLLOW-UP REVIEW OF OCONEE 1, 2, 3 BYPRODUCT, SOURCE AND SPECIAL NUCLEAR MATERIAL LICENSE AMENDMENT (TAC 6312)

PLANT NAME: Oconee 1, 2, 3
DOCKET NUMBER: 50-269/270/287
RESPONSIBLE BRANCH: ORB-1
PROJECT MANAGER: Don Neighbors
STATUS: Complete

We have reviewed the licensee's response dated April 29, 1977 to our request for additional information on the Oconee radioactive material safety program with respect to receipt, possession and use of byproduct, source and special nuclear material (memo Eisenhut to Goller dated 3/11/77.) In his response, the licensee specified those sections of the FSAR applicable to his Materials Safety Program with respect to handling radioactive materials. Our review of these sections shows that while he has not addressed our questions specifically, his radiation protection program and staff are compatible with our requirements for an acceptable radioactive materials safety program. Consequently, the amendments are acceptable.
