Re: Oconee Nuclear Station
Docket Nos. 50-269, -270, 287

Dear Mr. Rusche:

On March 30, 1976, six of the 24 condenser cooling water intake screens at the Oconee Nuclear Station were inspected in place by divers. A total of 9,939 small fingerling fish had collected on the screens. The fish were categorized, where possible, as to screen location, type and size. This information is tabulated in Enclosure 1. The mortality of these fish had an insignificant effect on the fisheries resources in Lake Keowee.

Very truly yours,

W.O. Parker, Jr.
