Docket Nos. 50-269, -270, -287

REGULATORY DOCKET FILE COPY

Dear Mr. Rusche:

On December 29, 1975, four of the 24 condenser cooling water (CCW) intake screens at the Oconee Nuclear Station were inspected. A total of 4825 small fingerling fish, weighing 12.1 Kgs., had collected on the screens. The fish were removed from the screens and categorized, where possible, as to screen location, type, size, degree of decomposition, and weight. This information is tabulated in Enclosure 1.

On December 30, 1975, six of the 24 condenser cooling water screens were inspected in place by divers. A total of 16,531 small fingerling fish had collected on the screens. The fish were categorized, where possible, as to screen location, type and size. This information is tabulated in Enclosure 2.

The mortality of these fish had an insignificant effect on the fisheries resources in Lake Keowee.

Very truly yours,

W.O. Parker, Jr.
