Re: Oconee Nuclear Station
Docket Nos. 50-269, -270, -287

Dear Mr. Rusche:

My letter dated May 6, 1976 appraised you of a situation in which several hydraulic shock suppressors at the Oconee Nuclear Station were determined to contain material which may not be compatible with the operating environment. It was stated that the seal material in those suppressors which were identified as being possibly defective on Oconee 1 and 2 would be replaced prior to their respective startups. For Oconee 3, it was stated that a shutdown would occur no later than June 20, 1976 for replacement of these suppressors.

At present, the Oconee 1 suppressors of the type identified have been repaired or replaced. This work is also in progress on Oconee 2 and will be completed before its startup in late June, 1976. However, necessary material to complete the Unit 3 repairs is not available for a scheduled outage beginning June 20, 1976. Therefore, the outage has been rescheduled to begin not later than July 4, 1976 in order to allow additional time to expedite material delivery. It is considered that the rescheduling of this outage of Oconee 3 will not be inimical to the health and safety of the public.

Very truly yours,

William O. Parker, Jr.
