Attention: Mr. R. Reid, Chief
Operating Reactors Branch #4

Reference: Oconee Nuclear Station
Docket Nos. 50-269, -270, -287

Dear Sir:

Recently, discussions have been held with the staff in connection with the NRC's preparation of the Oconee Nuclear Station Fire Protection Safety Evaluation Report (SER). These discussions concerned verifying implementation dates for the various systems associated with onsite fire protection. Additionally, it was committed to provide dates for installation of the fixed manual suppression system and dates for either an analysis of current communications systems or when an acceptable alternate system would be installed.

Accordingly, the following information is provided. The fixed manual suppression system will be installed in the respective cable spreading and equipment rooms by the second refueling outage for each unit following SER issuance. With regard to communications systems, either an analysis of the currently installed system will be performed and submitted for approval by October 31, 1978, or an acceptable alternate system will be installed by the second refueling outage for each unit following SER issuance.

Very truly yours,

William O. Parker, Jr.
