Jennifer:

P.S.I forgot to mention the words salt water intrusion to our fragile bay and to our Floridian and Biscayne aquifers. Since you guys are so narrowly focused I don't want to forget that. Putting too much salt in our bay is deadly to its natural composition. It depends on freshwater input to survive. If you steal the freshwater or dispense extra salt water the bay dies. By drawing so much fresh water FPL is causing a clusterf---- of cascading bad events here. Salt water is moving inland. How will sea level rise add to that? Please respond to my concerns NRC. Please respond.

>
> 3. Sea level rise, never addressed. If it was send me the studies. New research from the University of Miami co authored with the South Florida Water Management district have found sea level rise escalating at an astounding rate. Read the studies. Turkey point could be an island with no people to serve or service it.

> 4. You are siting 2 new reactors at a treacherously dangerous site. I lived through Love canal, Chernobyl and Fukushima. Shit happens. Your Barre plant proves that. Also the mysterious drilled holes in the pipes here.
>
> 5. Fish and Crocs have not been tested for nuke levels. They should immediately be tested and the water being dispensed in the bay. Allowing the county and State to do the testing when FPL (next error) gives to all county and State and Federal politicians in huge amounts is asking the fox to guard the henhouse. You need independent testing. Lee Hefty is a nice guy but he is a company man and would never buck his bosses. I heard there is already a gag order in place around here. FPL does investigations of people who oppose them to try to discredit them. Ask for there files on Councilman Scott Galvin and Philip Stoddard. I know they investigated them from an inside source. I suppose they have one on Laura Reynolds, Barry White and Cindy Lerner. Ask for these files. Demand them. You must put a stop to these investigations. This is bad behavior by a utility company. Very bad behavior.
>
> 6. The subject at hand: this is my drinking water. I do not want it contaminated. The NRC is not suppose to be a nuke-cheerleader. You are suppose to guard our safety and that of our children. As radioactive water in Japan is reaching our west coast shores you are allowing our aquifer to be destroyed by a selfish utility company. What are

we the next Flint Michigan? Are we next to be poisoned. Are we to have our drinking water used up for energy? The cooling canals are too damn hot. That proves the system has had its day. Goodbye. You can't use drinking water to cool them. That is plain old illogical. The system is broken and no one will admit it.
