

On November 3, 2015, the NRC received a DVD containing files used in the review of the Wolf Creek Nuclear Operating Company Flood Hazard Reevaluation Report submitted for Wolf Creek Nuclear Station. These files are not supported by the Agencywide Document Access and Management System (ADAMS). These files are revised input and output files used in modeling the flooding at Wolf Creek Nuclear Station based on staff's questioning during an ongoing audit. The original DVD can be found in the file center.
