Salem Nuclear Generating Station Unit 2
Renewed Facility Operating License No. DPR-75
NRC Docket No. 50-311

Subject: Withdrawal of Emergency License Amendment Request to Modify Technical Specification Requirements for One Inoperable Subcooling Margin Monitor Channel

Reference: Letter from John F. Perry to U.S. Nuclear Regulatory Commission, "Emergency License Amendment Request to Modify Technical Specification Requirements for One Inoperable Subcooling Margin Monitor Channel," dated February 11, 2016

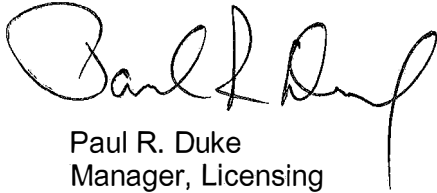

By letter dated February 11, 2016 (Reference), PSEG Nuclear LLC (PSEG) submitted an amendment to the renewed facility operating license listed above. The proposed changes would have modified the Technical Specification (TS) requirements for one inoperable reactor coolant system subcooling margin monitor channel to be consistent with the requirements for accident monitoring instrumentation in NUREG-1431, "Standard Technical Specifications – Westinghouse Plants."

Subsequent to the submittal, the reactor coolant system (RCS) subcooling margin monitor (SMM) channel was restored to operable status. As a result, PSEG is withdrawing the emergency license amendment request submitted in the reference letter above.

There are no regulatory commitments contained in this letter.

If you have any questions or require additional information, please contact me at 856-339-1466.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul R. Duke". The signature is fluid and cursive, with the first name "Paul" being the most prominent.
