Name: Ninette Jones

General Comment

The planet's lifeblood is water and without it we all die. I would rather sit in the dark with a glass of clean water than die of thirst under electric isotope light. The public ought to be made aware of all nuclear contamination and the ground water of the planet needs to be protected at all costs at all current sites in unrestricted areas or not. The public ought to be made aware of any possible threat and there is no room for error here.
