

On March 6, 2016, the NRC received an external hard drive (and additional courtesy copies) shipped on March 3, 2016 containing files used in the review of the NextEra Energy Flood Hazard Reevaluation Report submitted for the Seabrook Station Nuclear Power Plant. These files are not supported by the Agencywide Document Access and Management System (ADAMS). These files are revised input and output files used in modeling the flooding at Seabrook based on staff's questioning during an ongoing audit. The external hard drive can be found in the file center.
