

On June 3, 2015, the NRC received an external hard drive (dated June 1, 2015) containing files used in the review of the NextEra Energy Flood Hazard Reevaluation Report submitted for Point Beach Nuclear Plant. These files are not supported by the Agencywide Document Access and Management System (ADAMS). These files are the input and output files used in modeling the flooding at Point Beach Nuclear Plant during the re-evaluation. The hard drive can be found in the file center.
