FEMA Region IV has reviewed the letter from the utility concerning changes to the LEVY offsite response plans. They are confident that the plans are still good.

Al,

I read through the attached document and there really is no major impact to the Levy COL. I would expect that since the CR lab will no longer be available, the need for additional information on the transport of high level samples may be necessary.

Other than that I am confident that Levy is still good.

Randy

The NRC called me Tuesday. They need to know whether the Decommissioning of Crystal River Unit 3 will affect the Levy off site emergency planning. The utility has identified some changes per the attached letter from the utility to the NRC. Could you please verify?

Could you please review the letter from Progress Energy, Florida, particularly the third paragraph of the Enclosure? Do you agree with their conclusions? Would you require another review of the offsite plans before running any exercises or drills to substantiate the plans?

As discussed can you review and let me know what course of action if any FEMA needs to take?

Thanks,

Kevin
