General Comment

The NRC ensures all types of nuclear safety, including rail safety. I agree with the conclusion in the NUREG/CR-7209 document abstract:

"The combined summary of this work on fire accidents demonstrates that current U.S. Nuclear Regulatory Commission regulations and packaging standards provide a high degree of protection to the public health and safety against releases of radioactive material in real-world transportation accidents, were such events to involve SNF containers."

PUBLIC COMMENT: Spent nuclear fuel can be transported safely. Nuclear materials are routinely transported safely. Spent nuclear fuel is no different. Casks are hugely over-engineered. Please allow the transportation of spent nuclear fuel.
