Hi Tara,

Yes, the address remains the same. The new building connects the Rad. Onco. Building to the existing Medical Office Building where the PET/CT is currently located. The PET/CT will be moved into the new building and the Hot Lab will also support Gamma Guided Sentinel Node Surgical procedures. Also, the only AU who is currently administering Xofigo is the Rad. Oncologist, so we want to be able to administer it at the Trumbull site. I do not anticipate that we will do any other 35.300 cases because it will not be a full service Nuc. Med. Operation.

Good afternoon Mike.

I am finishing up the Bridgeport amendment and had a few questions. Just to confirm, the mailing address/location of use remains 5520 Park Avenue, Trumbull. Also, based on your letter it appears that you will be using Ra-223 Xofigo at the new location. Is that the only 35.300 material that you intend to use at that location? Other than getting the answers to those two questions, I am ready to issue the license.

Tara
