**March 2016 Excursion Report Summary, Cameco Resources, Smith Ranch-Highland Uranium Project, Permit 633**

Dear Mr. Jones:

Power Resources, Inc. d/b/a/ Cameco Resources (Cameco) is submitting the March 2016 Monthly Excursion Report Summary for the Smith Ranch-Highland Uranium Project. The Cameco Excursion Report table is attached. Monitor Well DM-003A remained on excursion from the previous report period.

During the report period, concentrations at Monitor Well DM-003A continued to show a decline, however rebounding slightly at the end of the month. The slight rebound is being attributed to inclement weather causing loss of power at the satellite facility and preventing pumping efforts temporarily. Cameco plans to continue with the current pumping regime at recovery well DX-113, as the results demonstrate that a positive impact is being made on the water quality in Monitor Well DM-003A.

As requested in the Notification of Excursion for DM-004A, dated December 8, 2015, and followed up on through discussion with Wyoming Department of Environmental Quality (WDEQ) – Land Quality Division (LQD) during meetings held on December 17, 2015 and January 27, 2016, Cameco awaits a response from LQD on the determination that Monitor Well DM-003A and DM-004A are not typical excursion as defined by statute and do not fit the intended definition of an excursion as outlined in W.S. § 35-11-103(f)(ii). LQD's response may request that Cameco provide a potential plan of mitigation, which would allow Cameco the liberty to make adjustments to pumping efforts knowing that DM-004A may go above the UCL values. This plan would also allow Cameco the ability to sample as necessary to effectively make changes to pumping and cleanup efforts.
