NRC Schedules Open House to Discuss 2015 Performance at Harris Nuclear Plant

The Nuclear Regulatory Commission staff has scheduled an open house for Monday, May 9, to discuss the agency's assessment of the Harris nuclear plant during 2015.

The plant, operated by Duke Energy, is located near New Hill, N.C., about 20 miles southwest of Raleigh.

The open house, which will include informational posters, is scheduled from 4 - 5 p.m. at the Holly Springs Cultural Center, 300 West Ballentine Street in Holly Springs.

NRC resident inspectors and other staff members will be available to answer questions on the safety performance and regulatory oversight of the Harris plant, as well as highlights of NRC inspections.

“We invite the public to visit with us and find out what we’re doing to ensure Harris and other nuclear plants are operated safely,” said NRC Region II Administrator Cathy Haney. “These annual meetings offer an opportunity for everyone, and especially people who live near the plant, to learn about our inspection and oversight programs.”

The NRC’s annual [assessment letter](#) to plant officials addressing 2015 Harris plant performance will serve as the main focus of the open house, but NRC staff members will be available to answer other questions about the NRC’s role at the plant.

The NRC review of the Harris plant for 2015 concluded that plant operations preserved public health and safety and protected the environment. Because of that performance, it will continue to receive the detailed routine or baseline inspections this year that all nuclear power plants receive.

The NRC uses color-coded inspection findings and performance indicators to assess plant performance. The colors start with green, which has very low safety significance, and then progress to white, yellow or red, based on the significance of the issues. All inspection findings and performance indicators for Harris were green in 2015.

[Current performance information](#) for the Harris plant, as well as more detailed information about NRC inspection and oversight, is available at www.nrc.gov. Specific plant performance indicators and inspection reports are updated at least quarterly.
