

May 31, 2016

The Honorable James M. Inhofe
Chairman, Committee on Environment
and Public Works
United States Senate
Washington, DC 20510

Dear Mr. Chairman:

The U.S. Nuclear Regulatory Commission (NRC) is publishing the following document in the *Federal Register*.

- Title: Programmable Logic Computers in Nuclear Power Plant Control Systems [NRC-2013-0214].
- Description of the document: This document denies a petition for rulemaking, PRM-73-17, submitted by Mr. Alan Morris (the petitioner) requesting that the NRC require that “new-design programmable logic computers” be installed in the control systems of nuclear power plants in order to “block malware attacks on the industrial control systems of those facilities.” In addition, the petitioner requested that nuclear power plant staff be trained “in the programming and handling of the non-rewriteable memories” for nuclear power plants.
- The NRC is denying the petition because the petitioner has not demonstrated that a need exists for a new regulation, nor presented any significant new information that would support the request changes.
- Dates: The docket for the petition for rulemaking, PRM-73-17, will be closed on the date of publication.

For more information, see the enclosed document.

Please contact me at 301-415-1776, if you have questions or need more information.

Sincerely,

/RA/

Eugene Dacus, Director
Office of Congressional Affairs
