**Subject:** [External\_Sender] Schedule and Scope

Scope of work includes surface water sampling of the local creek, groundwater sampling of existing monitoring wells, surface soil sampling (in addition to the previous sampling performed), and subsurface soil sampling (geoprobe) within the excavated pit area. A copy of the anticipated work schedule is attached. We will field screen the samples at the time of sampling. In the event elevated activity is identified, work will stop, personnel frisked and the area isolated and controlled until the work scope can be re-assessed. If you have any further questions please let me know.

**Michael A. Carr, CHP**  
Manager Radiation Safety and Design, Field Operations
