**Subject:** Columbia Generating Station, Acceptance of Requested Licensing Action: CAC No. MF7648 Relief Request visual examination Reduced testing time for Standby Liquid Control System

Ms. Williams,

By letter dated April 26, 2016. Energy Northwest for Columbia Generating Station submitted a relief request concerning a change to the hold time requirement for a segment of the Standby Liquid Control System.

The purpose of this email is to provide the results of the U.S. Nuclear Regulatory (NRC) staff's acceptance review of this relief request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed relief request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me.
