Document Control Desk
Washington, DC 20555

Subject: Oconee Nuclear Site
Docket Nos. 50-269, -270, -287
LER 269/96-09

Gentlemen:

Licensee Event Report 269/96-09, "High Pressure Injection System Technically Inoperable", was submitted on September 18, 1996. Further Engineering analysis has determined that this event is not reportable and the Licensee Event Report is not required.

During the initial report, Duke Power Company indicated that several instances existed in the past where High Pressure Injection (HPI) pump gas binding could occur during an Emergency Core Cooling system actuation. After further analysis, operation within the Letdown Storage Tank curves was determined to be adequate to prevent gas entrainment in the HPI pump suction piping. Therefore, the HPI system was determined to be past operable.

In light of this information, Duke Power Company has determined the event is not reportable per 10 CFR 50.73 and would like to rescind Licensee Event Report 269/96-09 and the commitments contained within the report.

Very truly yours,

J. W. Hampton
Vice President
