

**SAFETY INSPECTION REPORT AND COMPLIANCE INSPECTION**

<b>1. LICENSEE/LOCATION INSPECTED:</b> Advanced Corrosion Technologies and Training 13087A South Highway 288B, Suite A Angleton, Texas  REPORT NO: 2016-001		<b>2. NRC/REGIONAL OFFICE</b>  U.S. Nuclear Regulatory Commission Region IV, 1600 East Lamar Blvd Arlington, Texas 76011-4511	
<b>3. DOCKET NUMBER</b> 030-38764	<b>4. LICENSE NUMBER</b> 42-35135-02	<b>5. DATE OF INSPECTION</b> May 17-24, 2016	

**LICENSEE:**

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy to exercise discretion, were satisfied.

Non-Cited Violation(s) was/were discussed involving the following requirement(s) and Corrective Action(s):

- 4. During this inspection certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11. (Violations and Corrective Actions)

10 CFR 34.43(e)(1) requires, in part, that the radiation safety officer or designee shall conduct an inspection program of the job performance of each radiographer and radiographer's assistant, to include observation of the radiographer and radiographer's assistant during an actual industrial radiographic operation, at intervals not to exceed six months.

Contrary to the above, as of the date of the inspection on May 17, 2016, the radiation safety officer or designee failed to conduct the above-referenced inspection program of the job performance of each radiographer and radiographer's assistant (field audit) at the licensee's field office in Lysite, Wyoming, at intervals not to exceed six months. The last field audit was performed on October 21, 2015, so from this date until the date of the inspection, field audits were not performed, which is an interval greater than six months. The licensee committed to correct this violation by performing this field audit in June 2016, and ensuring future field audits are performed timely by utilizing a spreadsheet to document due dates for field audits of radiographers and radiographer's assistants at the Lysite, Wyoming field office.

**Licensee's Statement of Corrective Actions for Item 4, above.**

I hereby state that, within 30 days, the actions described by me to the inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.
