UIC PROGRAM REVIEW COMMENTS

Specific Comments - Additional Information Required (John Passehl: 307-777-5623)

1. On February 8, 2016 the Department issued permit 15-081, a Class V injection well permit that authorized construction and operation of injection wells M-FG6 and M-FG7. The purpose of the injection wells are for disposing of non-source and non-byproduct fluids into the shallow Battle Spring Formation.
2. The permit classified the groundwater as Class IVA (industrial) because of naturally occurring concentrations of total iron at 1.03 mg/L (> 0.3 mg/L – Class I drinking water standard), gross alpha (minus radon and uranium contribution) at 57 pCi/L (> 15 pCi/L - Class I drinking water standard), and radium 226+228 at 5.4 pCi/L (> 5 pCi/L - Class I drinking water standard). See Permit 15-081, Section 3, GROUNDWATER CLASSIFICATION.
3. The Department concurs with the findings outlined in **Section 4** (ENVIRONMENTAL IMPACTS OF THE PROPOSED ACTION), **Section 4.1** (Resource Areas Not Affected by the Proposed Action), **Section 4.2** (Resource Areas Potentially Affected by the Proposed Action), and **Section 7** (Conclusion) “...the NRC staff has determined that a Finding of No Significant Impact is appropriate.”
