Subject: Acceptance Review - Hope Creek and Salem LAR to Revise the Cyber Security Plan Milestone 8 Implementation Schedule (MF8071, MF8072, and MF8073)

Paul and Brian,

By letter dated June 30, 2016 (Agencywide Document Access and Management System (ADAMS) Accession No. ML16190A248), PSEG Nuclear LLC (PSEG) submitted a license amendment request to revise the Cyber Security Plan Milestone 8 implementation schedule for Hope Creek Generating Station and Salem Nuclear Generating Station, Unit Nos. 1 and 2. Specifically, this change would extend the PSEG Cyber Security Plan Milestone 8 full implementation date as set forth in the PSEG Cyber Security Plan Implementation schedule and revise the Facility Operating Licenses.

The purpose of this email is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of these amendment requests. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Section 50.90 of Title 10 of the *Code of Federal Regulations* (10 CFR), an amendment to the license must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendments in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

If you have any questions, please contact me.
