<p>3. DOCKET NUMBER(S)</p> <p>030-34973</p>	<p>4. LICENSE NUMBER(S)</p> <p>24-32159-01</p>	<p>5. DATE(S) OF INSPECTION</p> <p>June 16, 2016, within in-office review through June 24, 2016</p>

LICENSEE:

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

_____ Non-cited violation(s) were discussed involving the following requirement(s):

- 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.
(Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Main Office Inspection Next Inspection Date: June 16, 2016

Field Office Inspection Lab Office, 115 Jefferson St., Doniphan, MO

Temporary Job Site Inspection _____

PROGRAM SCOPE

This was a routine, unannounced inspection of an engineering and inspection company that utilized portable gauges for moisture and density testing, with offices in Poplar Bluff, MO, Doniphan, MO., Branson, MO, and Lake Ozark, MO. The company has approximately 35 employees. The licensee possessed six portable gauges as authorized by the license. Four of the gauges were stored at the licensee's facility in Doniphan, one at the Branson office, and one at the Lake Ozark office. The licensee currently does not store any gauges at its facility in Poplar Bluff, although it is authorized to do so. There were six authorized gauge users. Gauges at the Doniphan office were used on a daily basis during the construction season. Gauges stored at the Branson and Ozark offices were used only a few times a year.

Performance Observations

On June 16, 2016, the inspector was unable to perform a temporary job site inspection of the licensee because all gauge use was outside of NRC jurisdiction that day. The inspection consisted of interviews with available staff (including the RSO during in-office review), direct observations, review of pertinent records, and independent measurements. Interviews conducted with available staff revealed an adequate level of understanding of emergency and material handling procedures and techniques. Two gauges were adequately secured with two independent barriers to prevent unauthorized removal during storage. The licensee demonstrated how gauges were transported while using two independent barriers. Gauges were tracked by utilization logs. Independent measurements revealed no readings in excess of Part 20 limits in restricted or unrestricted areas. Personal whole body dosimetry use was observed during the inspection, and records did not indicate exposures in excess of Part 20 limits. The licensee possessed an operable, calibrated radiation survey meter to use in the event of an incident involving a gauge. A records review indicated that required leak tests were performed at the appropriate frequency.
