# **Revision Record (Summary)**

**Revision 00,** This JPM was developed as an RO Admin JPM for the 2016 ILT NRC Exam.

## SIMULATOR SETUP INSTRUCTIONS

1. Reset the simulator to IC-21.

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

#### 2. Manual Actuations:

- Remove the "B" RWCU Demin from service by inserting the following command: irf cu10r out
- Throttle the MO 1-1201-133 to maintain the following:
  - 1) RWCU Pump discharge pressure 100 to 200 psig above reactor pressure
  - 2) "A" RWCU Demin flow at 230 gpm.

#### 3. Malfunctions:

None

4. Remotes:

CU10R

5. Overrides:

None

- 6. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 7. This completes the setup for this JPM.

- The "B" RWCU Demin has been isolated per QCOP 1200-03 for a backwash and precoat.
- Local flow indication for both "A" and "B" RWCU pumps are 230 and 240 gpm, respectively.
- The QNE has been notified that substitute values for RWCU pump flow are to be entered for the Core Thermal Heat Balance.

#### **INITIATING CUE**

Enter substitute values for RWCU pump flow in accordance with QCOP 1200-03 step F.3 and QCOP 9950-17.

**Provide examinee with**: A marked up copy of QCOP 1200-03 and a blank copy of QCOP 9950-17.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

# **Revision Record (Summary)**

Revision 00, Developed for 2016 ILT NRC License Exam.

### SIMULATOR SETUP INSTRUCTIONS

- 1. Reset the simulator to IC-21
- NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

#### 2. Manual Actuations:

- Place the 1/2 A SBGTS TRAIN MODE SELECTOR SWITCH to: 'A' PRIM.
- Place the ½ B SBGTS TRAIN MODE SELECTOR SWITCH to: 'B' STDBY.
- · Close the 1-7503 U1 RB INLET DMPR TO SBGTS.
- · Close the 2-7503 U2 RB INLET DMPR TO SBGTS.
- · Verify all SBGTS annunciators are clear.

#### 3. Malfunctions:

None

4. Remotes:

Noned

- 5. Overrides: None
- When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
  - 7. This completes the setup for this JPM.

- You are the Unit 1 Admin NSO.
- QCOS 7500-04, Unit 1 Standby Gas Treatment Initiation and Reactor Building Ventilation Isolation Test was completed last shift for the ½ B Standby Gas Train.
- The Unit Supervisor has requested a verification of the standby lineup for the Standby Gas Treatment System (SBGTS).

## **INITIATING CUE**

Verify the SBGTS standby lineup and if necessary report any discrepancies to the Unit Supervisor.

**Provide examinee with:** A blank copy of QCOP 7500-01, Standby Gas Treatment System (SBGTS) Standby Operation and Start-Up after the examinee obtains it in the simulator.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

------

## Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

STEP	ELEMENT	<u>STANDARD</u>	SAT	UNSAT	Comment Number
*F.1.a	Reports the ½ A SBGTS TRAIN MODE SELECTOR SWITCH is in PRIM.	Recognizes the ½ A SBGTS is improperly selected as PRIM (Primary) instead of STBY (Stand-by).			
CUE:	As Unit Supervisor, acknowled "complete the lineup verification	ge the report, and direct the exa on."	minee	e to	
*F.1.b	Reports the ½ B SBGTS TRAIN MODE SELECTOR SWITCH is in STBDY.	Recognizes the ½ B SBGTS is improperly selected as STBY (Standby) instead of PRIM (Primary).			
*F.1.c (1)	Reports the 1-7503 U1 RB INLET DMPR TO SBGTS is mispositioned.	Recognizes the 1-7503 is CLOSED (green light lit) and should be in the OPEN (red light lit) position.			
*F.1.c (2)	Reports the 2-7503 U2 RB INLET DMPR TO SBGTS is mispositioned.	Recognizes the 2-7503 is CLOSED (green light lit) and should be in the OPEN (red light lit) position.			
F.1.c. (3)	Verifies ½ -7505A INLET DMPR is CLOSED.	Verifies ½ -7505A INLET DMPR is closed. -green light lit. -red light out			
F.1.c. (4)	Verifies ½ -7505B INLET DMPR is CLOSED.	Verifies ½ -7505B INLET DMPR is closed. -green light lit. -red light out			

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
F.1.c. (5)	Verifies the ½ -7504A TURB BLDG CLG AIR DMPR is OPEN.	Verifies the ½ -7504A TURB BLDG CLG AIR DMPR is OPEN.			
		-red light lit -green light out			
F.1.c. (6)	Verifies the ½ -7504B TURB BLDG CLG AIR DMPR is OPEN.	Verifies the ½ -7504B TURB BLDG CLG AIR DMPR is OPEN. -red light lit -green light out			
F.1.c. (7)	Verifies ½ -7507A SBGTS FAN DISCH DMPR is CLOSED.	Verifies ½ -7507A is CLOSED. -green light lit -red light out			
F.1.c. (8)	Verifies ½ -7507B SBGTS FAN DISCH DMPR is CLOSED.	Verifies ½ -7507B is CLOSED. -green light lit -red light out			
F.1.c. (9)	Verifies ½ -7509 XTIE DMPR is OPEN.	Verifies ½ -7509 is OPEN. -red light lit -green light out			
F.1.c. (10)	Verifies ½ -7503A SBGTS AIR HTR is OFF.	Verifies ½ -7503A is OFF. -OFF light lit -ON light out			
F.1.c. (11)	Verifies ½ -7503B SBGTS AIR HTR is OFF.	Verifies ½ -7503B is OFF. -OFF light lit -ON light out			

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number		
F.1.c. (12)	Verifies ½ -7506A, 1/2 A SBGTS FAN is OFF.	Verifies ½ -7506A, is OFF. -OFF light lit -ON light out					
F.1.c. (13)	Verifies ½ -7506B, 1/2 B SBGTS FAN is OFF.	Verifies ½ -7506B, is OFF. -OFF light lit -ON light out					
F.1.c. (14)	Verifies Instrument Air is available to AO ½ -7510A and AO ½ -7510B SBGT OUTLET VLVS.	Dispatches EO to verify Instrument Air is valved into AO ½ -7510A and AO ½ -7510B SBGT valves.					
CUE:	As EO, report: "Instrument Air Standby Gas Train A and B Out	is valved into AO ½-7510A and A tlet Valves."	AO ½ -	-7510E	3		
F.1.c. (15)	Verify all applicable SBGTS alarms are cleared.	Verifies all applicable SBGTS annunciators at the 912-5 panel are clear.					
CUE:	E: As the Unit Supervisor, inform the examinee that: "Another NSO will realign the SBGTS Trains to the correct lineup."						
EVALU	ATOR NOTE: The examinee sho	ould inform you that the task is o	compl	ete.

# Revision Record (Summary)

**Revision 00,** Developed for the 2016 ILT NRC Exam as an RO Admin JPM.

## SIMULATOR SETUP INSTRUCTIONS

#### 1. Reset the simulator to IC-21.

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

#### 2. Manual Actuations:

Adjust test potentiometer to mid position such that no alarm (high or low) occurs when the Trip Check pushbutton is depressed.

#### 3. Malfunctions:

None

#### 4. Remotes:

None

5. Overrides:

None

- 6. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 7. This completes the setup for this JPM.

- You are the Admin NSO.
- ARM 20 (1B SJAE AREA), has just been returned to service by Instrument Maintenance department.
- The Post Maintenance Test (PMT) requires an operational check of the upscale and downscale set points.
- The Unit NSO will acknowledge and reset the 901-3 panel alarms.

## **INITIATING CUE**

Perform QCOP 1800-01 step F.1 for ARM 20 (1B SJAE AREA), on the 901-11 panel. Notify the Unit Supervisor when the test is complete.

**Provide examinee with:** A blank copy of QCOP 1800-01.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

## Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

# JPM Start Time:

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
*F.1.a	<b>Depress</b> and <b>hold</b> TRIP CHECK pushbutton	-Locates ARM 20 on the 901-11 panel.			
		-Depresses and holds the TRIP CHECK pushbutton.			
*F.1.b	<b>Adjust</b> the PWR SPLY AREA MON until the HIGH lamp is lit.	-Locates the associated PWR SPLY AREA MON			
		-Slowly turns the TRIP CHECK ADJUST knob in the clockwise direction until the HIGH lamp on ARM 20 Trip Unit is lit.			
F.1.b. (1)	<b>Verify</b> ARM set point label is correct.	Verify alarm set point is adjusted to the set point indicated on the ARM 20 label plate.			
F.1.b. (2)	<b>Verify</b> high radiation alarm annunciates.	Verifies annunciator 901-3 D-1, TURB BLDG HI RADIATION, is in alarm.			
CUE:	As the Unit NSO, inform the examinee that "annunciator 901-3 D-1, TURB BLDG HI RADIATION, is in alarm."			BLDG	
*F.1.c	Adjust the PWR SPLY AREA MON until the LOW lamp is lit.	-Locates the associated PWR SPLY AREA MON			
		-Slowly turns the TRIP CHECK ADJUST knob in the counter- clockwise direction until the LOW lamp on ARM 20 Trip Unit is lit.			
F.1.c. (1)	<b>Verify</b> downscale alarm annunciates.	Verifies annunciator 901-3 F-1, AREA MONITOR DOWNSCALE, is in alarm.			

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
CUE:	As the Unit NSO, inform the examinee that "annunciator 901-3 F-1, AREA MONITOR DOWNSCALE, is in alarm."				
*F.1.d	Reset ARM Trip Unit	-Release TRIP CHECK pushbutton -Depress RESET pushbutton on ARM 20.			
F.1.e	Verify ARM Trip Unit resets	-Verify HIGH lamp on ARM 20 Trip Unit is NOT lit -Verify LOW lamp on ARM 20 Trip Unit is NOT lit.			
F.1.f	Verify 901-3 panel annunciators are clear.	-Verify annunciator 901-3 D-1 resets and clears. -Verify annunciator 901-3 F-1 resets and clears.			
CUE:	: As the Unit NSO, inform the examinee that "annunciators 901-3 D-1, and 901-3 F-1 have reset and cleared."				
EVALUATOR NOTE: The examinee should inform you the task is complete.

# **Revision Record (Summary)**

**Revision 02,** Developed for 2016 ILT NRC exam. Updated to new format and procedure changes. Name changed to accurately reflect the content of the JPM.

# Previous versions:

**Revision 00,** This JPM was developed IAW guidelines established in NUREG 1021 Rev. 9 Supplement 1, ES-301 and Appendix C. This JPM meets the criteria of ES-301 D.3 for "Administrative Topics."

This JPM was developed NEW for the 2009 ILT NRC Exam.

**Revision 01**, Revised to incorporate procedure changes.

# JPM SETUP INSTRUCTIONS

- 1. This is an Administrative JPM that may be performed in any setting where the necessary procedures and support information can be provided.
- 2. Verify the following information is available for the Initiating Cue:
  - · The current shift schedule
- 3. Verify the following information is available for JPM performance:
  - · QAP 0300-03, Rev. 41, Operations Shift Staffing
  - Tech Spec 5.2, Organization
  - · OP-AA-112-101, Rev.11, Shift Turnover and Relief
  - · SY-AA-102-201, Rev.9, "Call-Outs for Unscheduled Work"
- 4. Copy of SY-AA-102-201, Call-Outs For Unscheduled Work.
- 5. List of phone numbers for STA #1, STA #2, and STA #3.
- 6. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 7. This completes the setup for this JPM.

- You are the Shift Manager.
- Unit 1 and Unit 2 are at full power.
- The STA's wife is expecting a baby. He has permission from the Operations Director to leave if necessary to join his wife.
- At 0200 the STA departs the site when his wife calls him home because she has gone into labor.
- There are no other STA qualified supervisors on shift.

#### **INITIATING CUE**

If required, identify the staffing adjustments that need to be made, the time constraints involved and perform the callout per SY-AA-102-201, Attachment 1.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue. Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

# **Revision Record (Summary)**

**Revision 01,** Developed for 2016 ILT NRC exam. Updated from SRO-26-I use don the 2009 ILT NRC exam. Revisions included clarifying Elements and updating to the most recent revision of QOS 0005-S01.

#### **Previous Revisions**

**Revision 00,** This JPM is developed IAW guidelines established in NUREG 1021 Rev 9 ES-301 and Appendix C. This JPM meets the criteria of Category B.1 "Control Room Systems," for RO/SRO candidates.

This is a new JPM that was developed for the 2009 NRC Initial License exam.

# JPM SETUP INSTRUCTIONS

- 1. This is an Administrative JPM that may be performed in any setting where the necessary procedures and support information can be provided.
- 2. Verify the following information is available for the Initiating Cue:
  - QOS 0005-S01 properly completed for the week except for following errors:
    - o Section 11.c. Channel count rate  $\geq$  3 cps is incorrectly checked
    - Section 51.a.4 is inappropriately checked as completed within 7 days.
    - Section 33 shows SRM Channel 23 at 2 cps on Sunday shift 3.
- 3. This completes the setup for this JPM.

- You are the Unit Supervisor on Unit 1 during a refueling outage.
- Today is Shift 3 on Sunday April 3rd.
- Core alterations were suspended for three days during the week for scheduled outage work.
- That work has been completed and the second fuel shuffle can begin.
- The Mode switch is locked in REFUEL.
- All control rods are fully inserted.
- The Refueling cavity is flooded.
- Communications have been established and tested satisfactorily earlier in the shift.
- The following core alteration surveillances were completed satisfactorily:
  - SRM Functional Test QCIS 0700-09; completed 3/30 at 0600 hrs. SRM signal to noise ratios are: SRM 21-15:1, SRM 22-17:1, SRM 23 -14:1, SRM 24 -12:1.
  - IRM Functional Test QCIS 0700-09; completed 4/01 at 1000 hrs
  - SRM/IRM Detector Not Full In Functional Test QCOS 0700-01; completed 4/02 at 1600 hrs
  - Refuel interlocks operable per QCFHP 0500-08; completed 3/26 at 0400 hrs
  - One Rod out Interlock operable per QCOS 0300-17; completed 4/02 at 2300 hrs

#### **INITIATING CUE**

Review QOS 0005-S01 Sections, 11, 16, 25, 33, 38, 39, and 51 for Start of Daily Refueling Activities.

Contact the Fuel Handling Supervisor when your review has been completed, and authorize the start of fuel moves OR state why fuel moves cannot be allowed.

# (Provide prepared exam copy of QOS 0005-S01 to the examinee when the Initiating Cue is acknowledged.)

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to

management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

# JPM Start Time:

<u>STEP</u>	ELEMENT	<u>STANDARD</u>	SAT	UNSAT	Comment Number
11	Verify SRMs are operable.	Sunday Shift 3 already completed for steps (a) and (b). Step 11.(c), SRM count rates ≥ 3 cps is CHECKED IN ERROR.			
16	Ensure Reactor Water Level indications are entered and verify readings are within 12 inches of each other.	Sunday Shift 3 already completed. Both indicators reading >60 inches with Refueling cavity flooded.			
25.b.	Verify Rx Coolant Circulation.	Sunday Shift 3 already completed. One loop of shutdown Cooling in service.			
33	Checks SRM counts and channel check within 1 decade of each other.	Sunday Shift 3 already completed. All channels are within 1 decade. May recognize that SRM 23 is reading only 2 cps.			
38	Ensure Reactor Water Level indications are entered and verify readings are within 12 inches of each other.	Sunday Shift 3 already completed. All 4 indicators reading >60 inches with Refueling cavity flooded.			
39	Ensure Reactor Water Level indications are entered and verify readings are within 12 inches of each other.	Sunday Shift 3 already completed. All 4 indicators reading >60 inches with Refueling cavity flooded.			
51.a.1	Verify SRM Functional completed within 7 days prior to the start of core alterations.	Sunday Shift 3 checked per turnover information.			

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
51.a.2	Verify IRM Functional completed within 7 days prior to the start of core alterations.	Sunday Shift 3 checked per turnover information.			
51.a.3	Verify SRM/IRM Detector not Full In Functional completed within 7 days prior to the start of core alterations.	Sunday Shift 3 checked per turnover information.			
*51.a.4	Verify Refueling Interlock test completed within 7 days prior to the start of core alterations.	Recognizes Sunday Shift 3 is CHECKED IN ERROR. Performance of QCFHP 0500-08 has exceeded 7 days from the given Initial Conditions.			
CUE:	If contacted to perform QCFHP 05 state: "You will brief the crew and	-	g Sup	erviso	r,
51.a.5	Verify Rx water level > 23 ft above the top of the RPV flange.	Sunday Shift 3 checked per turnover information.			
51.a.6	Verify Rx Mode Switch locked in Refuel with any control rod withdrawn.	Sunday Shift 3 marked N/A per turnover information.			
51.a.7	Verify One-Rod-Out interlock is operable within 7 days prior to the start of control rod withdrawal.	Sunday Shift 3 checked per turnover information.			
51.a.8	Verify Direct Communications have been established.	Sunday Shift 3 checked per turnover information.			

. . . . . . . . . . . . . . . . . .

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number			
*51.a.9	Verify Operable fully-inserted SRM detector reading of $\geq$ 3 cps or $\geq$ 0.7 cps with a signal to noise ratio <sup>3</sup> 20/1 located in the core quadrant where Core Alterations will be performed.	Recognizes Sunday Shift 3 block is CHECKED IN ERROR. SRM 23 reading was 2 cps and signal to noise ratio is < 20/1 per the turnover.						
CUE:	CUE: If contacted to investigate and troubleshoot SRM 23, as the Instrument Maintenance Supervisor state you will:							
	"Prepare a package and start wor	k as soon as possible".						
51.a.10	Verify all control rods fully inserted.	Sunday Shift 3 checked per turnover information.						
51.a.11	Verify withdrawn control rod accumulator pressures >940 psig once per 7 days.	Sunday Shift 3 marked N/A per turnover information.						
EVALUAT	OR NOTE: The examinee should re	eport to the FHS that:	•					
"The requirements of QOS 0500-S01 are NOT satisfied and Refueling activities EXCEPT for performance of QCFHP 0500-08 are NOT authorized".								
	<ul> <li>"Also, SRM 23 is inoperable, which prevents fuel movement in the associated quadrant of the core.</li> </ul>							
	EVALUATOR NOTE: After acknowledging the report, the examinee should inform that the task is complete.

# Revision Record (Summary)

**Revision 00:** Developed for 2016 ILT NRC exam. This is a modified Bank JPM. Also revised to the new template and current procedures.

# AD-SRO-6 Revsions:

**Revision 01,** This is a LORT Bank JPM (AD-SRO-6) that was used on the 2011 ILT NRC License Exam. Updated Fire Permit information.

## SIMULATOR SETUP INSTRUCTIONS

- 1. NOTE: This JPM may be conducted in any appropriate setting; i.e., simulator, classroom, Control Room, provided that the following procedures are available to the candidate:
  - · OP-MW-201-007, FIRE PROTECTION SYSTEM IMPAIRMENT CONTROL
  - QCAP 1500-01, ADMINISTRATIVE REQUIREMENTS FOR FIRE PROTECTION
- 2. Verify the following for this JPM setup:
  - A current revision of OP-MW-201-007 Attachment 1 "Fire Protection Impairment Permit" is filled out as <u>follows</u>:
  - 1) Fill out Section I Initiator:" of the Fire Protection Permit as follows:

Initiator: "IMD Supervisor"	Station: "Quad"	Unit: "00"
Name: "A. Smith"	Phone: "X 2210"	Dept/Co: "IMD/Exelon"
Sch. Start Date: "current"	Bldg: "RX"	EPN#:
Sch. End Date: "current + 1"	Elev. "595"	Door #:
AR/WR/OOS#: "WO 1607822"		Det. Zone: "
		Pent #:

Do NOT check the Structural fireproofing OR Wall Penetration boxes.

Impairment Description: "Perform QCIS 7600-04 Unit 0 Standby Diesel Generator Cardox Fire Protection Functional Test."

- 2) Fill out section II. "FIRE MARSHAL REVIEW" of the Fire Protection Impairment Permit as follows:
  - a. Fire Zone(s): 9.3 / For Barriers: Check the "Functional" box.
  - b. Technical Requirement Manual? Check the "Yes" box. "QCAP 1500-01"
  - c. Mark "None" in the Fire Watch Required: block and "N/A" below.
  - d. Check the "NO" box for Additional Compensatory Measures.
  - e. Fire Detector Operability Check Required? Check the "NO" box.
  - f. NEIL Notification Required? Check the "NO" box.
  - g. Fire Marshal Instructions: "Return to operable status in 14 days"
  - h. Restoration/Testing Requirements: "Completion of Work Package. PMT per Work Package".
  - i. Sign and date as Fire Marshal for Authorization Block.
- 3. This completes the setup for this JPM.

- You are the Operations Field Supervisor.
- An Instrument Maintenance Supervisor has submitted a fire permit to allow performance of QCIS 7600-04, "Unit 0 Standby Diesel Generator Cardox Fire Protection Functional Test".
- The Instrument Maintenance Supervisor has informed you that this surveillance will render the Cardox System inoperable.

#### INITIATING CUE

Review Fire Protection Impairment Permit 1234. Approve the permit OR explain the reason(s) why you cannot.

#### Provide examinee with: A copy of fire permit 1234, OP-MW-201-007, Attachment 1.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue. Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>		TASNU	Comment Number			
MW-201-007	EVALUATOR NOTE: When requested (located), provide a copy of QCAP 1500-01, OP- MW-201-007, or Fire Pre-Plan. The sequence of providing the reference material may vary by examinee. The examinees may perform the verification steps in any order.							
	Obtains Procedures.	Obtains a copy of QCAP 1500- 01.						
NOTE: The	examinee may perform the fo	llowing steps in any order.						
Att. J	Determines effect of disabling the Cardox for ½ EDG.	Reviews QCAP 1500-01 Att. J and determines ½ EDG Cardox is a required EFP Cardox system.						
The followin The Fire Prot follows: None		•						
• NO is " <b>YES</b> '	checked in the box for "Addition	nal Compensatory Measures" (sho litional Compensatory Measures established or verified.")			ed			
*D.3.c.(2)	Determines hourly fire watch established within one hour.	Reviews QCAP 1500-01 step D.3.c.(2) and determines an hourly fire watch must be conducted if this permit is approved.						
*D.3.c.(4)	Determines backup suppression required within one hour.	Reviews step D.3.c.(4) and determines backup suppression will also be required. (page 15 of 93)						

SRRS: 3D.105 (when utilized for operator initial or continuing training)

.

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number		
Attach. 1	Determines that the Fire Watch Performed By field must be filled in "IMD" or other appropriate department.	Recognizes the "N/A" is not correct for this field.					
	EVALUATOR NOTE: The examinee may choose to correct the provided impairment. Th is acceptable.						
	Reviews the permit for accuracy and Notifies the Evaluator of his conclusions.	The examinee reviews the permit for accuracy IAW OP- MW-201-007 "FIRE PROTECTION SYSTEM IMPAIRMENT CONTROL" step 4.4 and determines the fire impairment permit cannot be approved as written because the Fire Protection Permit was filled out improperly in section II. "FIRE MARSHAL REVIEW" <b>None</b> is marked in the "Fire Watch Performed By:" block (should be marked "YES" and a Description of the additional Compensatory Measures should be included i.e., "backup suppression required").					

CUE: After the examinee explains why he cannot approve the fire permit as written, as the IM Supervisor requesting the permit state that:

"You will rewrite the permit and bring it back for approval on the next shift".

**EVALUATOR NOTE:** The examinee should inform you that the task is complete.

# Revision Record (Summary)

Revision 00, Developed for 2016 ILT NRC exam.

# SIMULATOR SETUP INSTRUCTIONS

- This is an Admin JPM. It may be conducted in a variety of settings, provided the needed reference material is available.
- NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

This completes the setup for this JPM.

- You are the Unit 1 Unit Supervisor.
- Main Control Room annunciator 901-3 G-2 is in alarm.
- An EO has been dispatched and has reported MCC 17-1-1 breaker 18 is ON.
- A Chemistry Technician has been dispatched and reports:
  - Low flow confirmed via sight glass FI 1-1741-25.
  - 1-3999-542, SERVICE WATER RADIATION MONITOR INLET ISOLATION VALVE verified OPEN
  - EDUCTOR INLET PRESSURE is 15 psig
  - OUTLET PRESSURE is 3 psig.

# **INITIATING CUE**

Based on the field reports, determine the status of the Service Water Radiation Monitor. Complete any required paper work and forward to the Shift Manager for review.

(Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

## Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

# **Revision Record (Summary)**

**Revision 00:** Developed for 2016 NRC ILT Exam. Based on 2012 NRC Exam JPM. This JPM is new as it changes the Initial Conditions and the PARs flow chart was radically changed from the one used in the 2012 JPM.

#### SIMULATOR SETUP INSTRUCTIONS

Provide examinee with:

1.) Utility Message #1 NARS form completed as follows: Utility Message 1 State Message N/A Block #1. Status = Drill/Exercise Block #2. Station = Quad Cities Block #3. Onsite Condition = Site Area Emergency Block #4. Accident Classified: Time = "To -30 minutes" Date = "today"EAL# = "FS1" Block #4. Accident Terminated: Time:=N/A, Date:=N/A Block #5. Release Status = None Block #6. Type of Release = N/ABlock #7. Wind Direction = 180 degreesBlock #8. Wind Speed: Meters/Sec = 2.24Miles/Hr = 5.0Block #9. Recommended Actions = None Block #10. Additional Information = None Verified with [provide signature] Approved by [provide SM signature] Block #11 Transmitted By [provide name] Phone Number [309-227-2210] Time/Date "To -20 minutes/Today" Block #12 Received By [provide name] Organization = IEMA, Time/Date: "To -20 minutes/Today" Initial and Final blocks checked for Quad Cities NARS Code 43 Initial Roll Call complete block on back Time/Date "To -18 minutes/Today"

2.) A marked up Hot EAL Board with the condition for a General Emergency circled.

- Unit 1 was operating at 100% rated power when a transient occurred that caused an automatic scram.
- The Emergency Plan was activated and a Site Area Emergency (FS1) was classified 30 minutes ago due to high Drywell radiation of 700 R/hr.
- 20 minutes ago Transmission of NARS (**Utility Message #1**) was completed (see attached)
- <u>All</u> plant personnel have been notified of the classification level, reason for the classification, and the TSC and OSC have been activated.
- The TSC is **NOT** at minimum staffing and the TSC has **NOT** assumed Command and Control.
- The Shift Communicator has performed Emergency Response Organization (ERO), Emergency Notification System (ENS), and Emergency Response Data System (ERDS) activation, and the NARS notification.
- The Shift Emergency Director has upgraded the classification to a General Emergency (FG1) based on:
  - Loss of RCS (DW Radiation >100R/hr)
  - Loss of Fuel Clad (DW Radiation >6.65E+02 R/hr)
  - Potential Loss of Containment (DW Radiation >1.55E+03 R/hr)
- There has been **NO** Change in release status, or meteorological data since message #1 was sent
- To is the current time. To is \_\_\_\_\_ (Use the Simulator Clock)
- THIS IS AN EXERCISE
- THIS JPM IS TIME CRITICAL

#### INITIATING CUE

As the Shift Emergency Director, prepare the necessary form(s) that would allow the Shift Communicator to complete the required State and Local notifications.

#### Provide examinee with:

- A copy of EP-MW-114-100-F01 "Nuclear Accident Reporting System (NARS) Form" <u>Utility Message #1</u> form completely filled out as a Site Area Emergency
- · EP-MW-114-100 "Midwest Region Off-Site Notifications"
- A blank copy of EP-MW-114-100-F01 "Nuclear Accident Reporting System (NARS) Form"
- EP-AA-111-F-06 Rev G, Quad Cities Plant Based PAR Flowchart.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

SRRS: 3D.105 (when utilized for operator initial or continuing training)

- Unit 1 was operating at 100% rated power when a transient occurred that caused an automatic scram.
- The Emergency Plan was activated and a Site Area Emergency (FS1) was classified 30 minutes ago due to high Drywell radiation of 700 R/hr.
- 20 minutes ago Transmission of NARS (Utility Message #1) was completed (see attached)
- <u>All</u> plant personnel have been notified of the classification level, reason for the classification, and the TSC and OSC have been activated.
- The TSC is **NOT** at minimum staffing and the TSC has **NOT** assumed Command and Control.
- The Shift Communicator has performed Emergency Response Organization (ERO), Emergency Notification System (ENS), and Emergency Response Data System (ERDS) activation, and the NARS notification.
- The Shift Emergency Director has upgraded the classification to a General Emergency (FG1) based on:
  - Loss of RCS (DW Radiation >100R/hr)
  - Loss of Fuel Clad (DW Radiation >6.65E+02 R/hr)
  - Potential Loss of Containment (DW Radiation >1.55E+03 R/hr)
- There has been **NO** Change in release status, or meteorological data since message #1 was sent.
- To is the current time. To is \_\_\_\_\_ (Use the Simulator Clock)
- THIS IS AN EXERCISE
- THIS JPM IS TIME CRITICAL

#### **INITIATING CUE**

As the Shift Emergency Director, prepare the necessary form(s) that would allow the Shift Communicator to complete the required State and Local notifications.

# JOB PERFORMANCE MEASURE VALIDATION CHECKLIST

NOTE:	•	of this checklist should be performed upon initial validation. JPM usage, revalidate JPM using steps 9 and 13 below.
<u>RJV/S/</u>	1.	Task description and number, JPM description and number are identified.
<u>RJV/S/</u>	2.	Knowledge and Abilities (K/A) references are included.
<u>RJV/S/</u>	3.	Performance location specified. (in-plant, control room, simulator, or other)
<u>RJV/S/</u>	4.	Initial setup conditions are identified.
<u>RJV/S/</u>	5.	Initiating cue (and terminating cue if required) are properly identified.
<u>RJV/S/</u>	6.	Task standards identified and verified by SME review.
<u>RJV/S/</u>	7.	Critical steps meet the criteria for critical steps and are identified with an asterisk (*).
<u>N/A</u>	8.	If an alternate path is used, the task standard contains criteria for successful completion.
<u>RJV/S/</u>	9.	Verify the procedure(s) referenced by this JPM reflects the current revision: Procedure <u>QCOS 0300-17</u> Rev: <u>12</u> Procedure <u>QCOP 0207-02</u> Rev: <u>11</u> Procedure <u>Rev:</u>
<u>RJV/S/</u>	10.	Verify cues both verbal and visual are free of conflict.
<u>RJV/S/</u>	11.	Verify performance time is accurate
<u>N/A</u>	12.	If the JPM cannot be performed as written with proper responses, then revise the JPM.
<u>RJV/S/</u>	13.	When JPM is initially validated, sign and date JPM cover page. Subsequent validations, sign and date below:

## **Revision Record (Summary)**

Revision 00, This JPM was developed new for the 2011 ILT NRC Exam.

**Revision 01,** This JPM was revised for the 2016 ILT NRC Exam. Originally titled JPM LS-078-I. Designated step to "verify ROD OUT BLOCK annunciator does not clear" as critical.

## SIMULATOR SETUP INSTRUCTIONS

- 1. Reset the Simulator to IC 8. (Any Shutdown IC in which the Mode Switch can be placed in REFUEL)
- NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.
- 2. Go to RUN.
- 3. Lock the Mode Switch in REFUEL.
- 4. Verify the RWM is NOT bypassed.
- 5. Cycle the Rod Select Power Switch to verify no rod is selected. Leave switch in OFF.
- 6. Verify the REFUEL PERMIT light is ON.
- 7. Verify ROD OUT BLOCK annunciator (901-5, C-3) is ON.
- 8. Acknowledge annunciators as necessary.
- 9. Provide a current revision of the following procedures, signed off as follows:
  - · QCOS 0300-17
    - o Initial steps D.1 thru D.7, N/A steps D.8-D.9, Initial steps D.10-D.11.
    - Steps H.4.b and H.11.b marked N/A.
  - QCOP 0207-02 with Prerequisite C.1 signed off and C.2 marked N/A.
- 10. Provide Equipment Status Tag filled out as follows:
  - "Rod Worth Minimizer in Bypass"
- 11. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 12. This completes the setup for this JPM.

- Preparations are being made to begin refueling operations.
- The Mode Switch is locked in REFUEL.
- All Prerequisites have been completed for QCOS 0300-17, One-Rod-Out Interlock Surveillance.
- The Unit Supervisor has reviewed steps of QCOS 0300-17 and identified the Not-Applicable (N/A) steps.
- All QCOP 0207-02 prerequisites have been completed for bypassing the Rod Worth Minimizer (RWM).
- The Equipment Status Tag has been prepared.

#### **INITIATING CUE**

Perform the One-Rod-Out Interlock Surveillance, QCOS 0300-17.

**EVALULATOR:** Provide the prepared support material:

- · QCOS 0300-17
- · QCOP 0207-02
- Equipment Status Tag

Fill in the JPM Start Time when the student acknowledges the Initiating Cue. Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

<u>STEP</u>	<u>ELEMENT</u>	ELEMENT STANDARD		TASNU	Comment Number
H.1	QCOP 0207-02 referenced for bypassing RWM.	Bypass the RWM per QCOP 0207-02.			
QCOP 0207-02 F.1.f	Initial the reason that the RWM is being bypassed.	Initials step F.1. f. (Performing a Procedure or Test which specifically references bypassing the RWM).			
QCOP 0207-02 F.1.f (1)/(2)	Fills in Procedure/Test # and Step#.	Fill in Procedure# as "QCOS 0300-17" and Step# as "H.1."			
QCOP 0207-02 F.2.a	Attaches the Equipment Status Tag to the ROD MOVEMENT CONT SWITCH.	Attaches the prepared Equipment Status Tag to the ROD MOVEMENT CONT SWITCH on the 901-5 panel.			
QCOP 0207-02 *F.2.b	RWM MODE SELECT switch selected to BYPASS.Places the RWM MODE SELECT switch to BYPASS and records the date and time.				
EVALU/ selected		OCK annunciator will clear whe	n a roo	d is	
*H.2	Select a Control Rod.	Selects a peripheral Control Rod.			
H.3	"Rod Out Permit" light is verified ON.	Verify "Rod Out Permit" light is lit on the 901-5 panel.			
*H.4.a	Withdraw the selected Control Rod.	Withdraws the selected Control Rod one (1) notch.			
*H.5	ROD SELECT POWER switch placed in OFF.	Turn ROD SELECT POWER switch to OFF.			

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>		UNSAT	Comment Number	
	EVALUATOR NOTE: The ROD OUT BLOCK annunciator will alarm when the Rod Select Power switch is placed to OFF.					
*H.6	ROD SELECT POWER switch placed in ON.	Turn ROD SELECT POWER switch to ON.				
*H.7	Select a second Control Rod.	Selects a peripheral Control Rod on the opposite side of the core.				
*H.8	Verifies Control Rod withdrawal block can NOT be cleared.	Verifies annunciator 901-5 C-3, "ROD OUT BLOCK" cannot be cleared by depressing the annunciator RESET pushbutton <u>OR</u> the alarm is NOT in reflash.				
H.9	ROD SELECT POWER switch placed in OFF.	Turn ROD SELECT POWER switch to OFF.				
H.10	ROD SELECT POWER switch placed in ON.	Turn ROD SELECT POWER switch to ON.				
H.11.a	Withdrawn Control Rod fully inserted.	Inserts the withdrawn Control Rod to Position 00 using the ROD MOVEMENT CONT switch.				
CUE:	As Unit Supervisor, inform the	e examinee that:	•	•

# Revision Record (Summary)

Revision 00, Developed for the 2016 ILT NRC Exam IAW NUREG 1021 Rev. 10

#### SIMULATOR SETUP INSTRUCTIONS

1. **RESET** the Simulator to IC-20.

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2. OVERRIDE the 1A FR ISOL VLV closed light OFF: ior lohs13206a1 off
- 3. **OVERRIDE** both CCST level indications to 2.0 feet:

# ior aoli033403 2 ior aoli033404 2

- 4. **OVERRIDE** the HW Level Control Switch to "HAND": ior dihs13340108 hand
- 5. VERIFY the HW Level Control Switch in "AUTO".
- 6. **DIAL** "NORM COND REJ" (AO 1-3303) to **0%**.
- 7. **DIAL** "EMERG COND REJ" (AO 1-3304) to **0%**.
- 8. Place the 1B Cond Makeup Pump in PTL.
- 9. **VERIFY** at least one Service Water pump is operating.
- 10. **OVERRIDE** LFFRV "SLOW/FAST OPEN" pushbuttons OFF:

# ior difc10643ios off

## ior difc10643iof off

11. Prevent LP ECCS injection:

imf cs01a (trip 1A CS pump)

imf cs01b (trip 1B CS pump)

irf rh22br open (open breaker for RHR 29B vlv)

- 12. **Trip Latch** the HPCI turbine.
- 13. Inhibit ADS.
- 14. **Insert** a manual reactor scram, place the Mode Switch to **Shutdown**, and allow RPV water level to stabilize.
- 15. Close the 1A FW REG ISOL valve.
- 16. **TRIP ALL** RFP's and **verify** discharge valves MO 1-3201A/B/C are **OPEN**.
- 17. VERIFY 1B FW REG ISOL valve is OPEN.
- 18. PLACE all three FRV controllers in MANUAL and CLOSE ALL three FRVs.
- 19. **VERIFY ONLY** the 1B and 1C Condensate/Condensate Booster pumps are operating. Adjust AO 1-3401 accordingly to maintain pump amps in the green band.

#### SIMULATOR SETUP INSTRUCTIONS

- 20. Verify ONLY 3 Condensate Demins are on-line.
- 21. Set trigger for 1B FRV lockup when the valve opens with the following commands:

#### trgset 1 "fwv1642b.gt.0.02"

#### trg 1 "imf fw08b"

22. **Set trigger** to RESET the 1B FRV lockup when the RESET pushbutton is depressed with the following:

#### trgset 2 "zdihs10640303b"

#### trg 2 "dmf fw08b"

- 23. **INSERT** a 0.5% break in the 1A Recirc pump discharge pipe: imf rr11a 0.5.
- 24. **Verify** RPV water level lowers to < -142 in.
- 25. **Open** all 5 ADS valves and leave switches in MAN.
- 26. Verify RPV pressure is < 300 psig. (use ADS valves as necessary)
- 27. Hang OOS tags on:
  - a) 1A FW REG ISOL valve
  - b) 1A FRV Controller
- 28. **OPEN SimView** and set variable **cnmliq = 250000**. Verify Hotwell level is approx. 14 in.
- 29. Acknowledge annunciators.
- 30. Take a snapshot or save to any open IC.
- 31. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 32. This completes the setup for this JPM.

- Unit 1 was operating at 50% power with the 1A FRV OOS when a large LOCA occurred.
- QGA 100 and QGA 200 actions are ongoing.
- The US has determined that Alternate Injection Systems are needed to restore RPV water level.
- Hotwell makeup sources are currently inadequate for continued use of the Condensate System as an RPV injection source.

#### INITIATING CUE

Initiate Standby Coolant in accordance with QCOP 3200-09 and maximize injection.

Report to the Unit Supervisor when the Condensate System is injecting.

#### Provide examinee with: A blank copy of QCOP 3200-09.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

# Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

## **Revision Record (Summary)**

Revision 00, Developed for the 2016 ILT NRC Exam.

#### SIMULATOR SETUP INSTRUCTIONS

#### 1. Reset the simulator to IC-17

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

#### 2. Manual Actuations:

Insert a manual reactor scram

Place the Mode Switch in Shutdown

Allow RPV level to stabilize at +30 in.

Close the Inboard and Outboard MSIVs.

Place the RWCU system in Reject Mode with both pumps on at 80 gpm, (FCV 1-1239 approx. 15% open).

#### 3. Malfunctions:

None

#### 4. Remotes:

None

5. Overrides:

None

- 6. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 7. This completes the setup for this JPM.

- The Unit has been SCRAMMED due to an Instrument Air leak in the Reactor Building.
- The Unit Supervisor has directed actions of QOA 4700-06, Loss of Instrument Air, and attempts to isolate the leak are still in progress.
- The Unit Supervisor has entered QGA 100 and has directed a cooldown at < 100°F/hr using the Main Steam Line Drains.
- An Extra NSO has been assigned to monitor and record the RPV cooldown per QCOS 0201-02.
- This JPM is NOT time critical.

#### **INITIATING CUE**

Initiate an RPV cooldown of  $\leq$  80°F/hr using the Main Steam Line Drains through the Main Turbine Bypass valves per QCOP 0250-05.

**Provide examinee with:** A copy of QCOP 0250-05, with step C.1 and F.3 marked N/A and initialed by the Unit Supervisor.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

\_\_\_\_\_

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
F.1.	Initiate QCOS 0201-02.	Verifies surveillance is in progress per Initial Conditions.

## **Revision Record (Summary)**

**Revision 00,** This JPM was developed from Bank JPM B.1.b for ILT Certification Exam 03-1 IAW NUREG 1021 Revision 9 and to update format.

Revision 01, Update for correct procedure revisions.

Revision 02, Update for correct procedure revisions.

Revision 03, Update JPM template and use on 2016 ILT NRC Exam.

#### SIMULATOR SETUP INSTRUCTIONS

- 1. Reset the simulator to IC 21 or any other compatible IC. Run CAEP file.
- 2. Manual Actuation:
  - Ensure that the RCIC system is in its normal standby lineup.
- 3. Malfunctions / Commands:
  - trgset 1 "RCNTB.GT.0.5" (Sets trigger based on 50% RCIC turbine speed)
  - trg 1 "imf rc12" (inserts RCIC isolation)
  - trgset 2 "an:9014a15" (sets trigger on annunciator 901-4 A-15)
  - trg 2 "dmf rc12" (deletes RCIC isolation)
- 4. Remotes: NONE
- 5. Overrides: NONE
- 6. When the above steps are completed for this and other JPMs to be run concurrently, then validate the concurrently run JPMs using the JPM Validation Checklist.
- 7. This completes the setup for this JPM.

- A loss of feedwater has resulted in a reactor scram and entry into QGA 100.
- The Unit Supervisor has determined that RCIC injection is needed to restore reactor water level and control RPV pressure.
- Hard Card use has been authorized by the Unit Supervisor.
- RCIC is in its normal standby lineup.
- This JPM is NOT time critical

#### INITIATING CUE

Establish Unit 1 RCIC injection into reactor vessel using the manual initiation pushbutton per the Hard Card.

#### Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

### JPM Start Time:

Step 1       manual initiation pushbutton.       MAN INITIATION pushbutton on the 901-4 for at least 30 seconds.         Verifies the system lines up to inject.       Using indications on the 901-4 panel verifies system valves are lining up for injection.	<u>STEP</u>	ELEMENT	<u>STANDARD</u>		UNSAT	Comment Number

#### JOB PERFORMANCE MEASURE VALIDATION CHECKLIST

**NOTE:** All steps of this checklist should be performed upon initial validation. Prior to JPM usage, revalidate JPM using steps 9 through 13 below. RJV/S/ 1. Task description and number, JPM description and number are identified. RJV/S/ 2. Knowledge and Abilities (K/A) references are included. RJV/S/ 3. Performance location specified. (in-plant, control room, simulator, or other) RJV/S/ 4. Initial setup conditions are identified. RJV/S/ 5. Initiating cue (and terminating cue if required) are properly identified. RJV/S/ 6. Task standards identified and verified by SME review. RJV/S/ 7. Critical steps meet the criteria for critical steps and are identified with an asterisk (\*). RJV/S/ 8. If an alternate path is used, the task standard contains criteria for successful completion. RJV/S/ 9. Verify the procedure(s) referenced by this JPM reflects the current revision: Procedure QCOP 1600-13 Rev: 28 Procedure Rev: \_\_\_\_\_ Procedure Rev: RJV/S/ 10. Verify cues both verbal and visual are free of conflict. RJV/S/ 11. Verify performance time is accurate RJV/S/ 12. If the JPM cannot be performed as written with proper responses, then revise the JPM. RJV/S/ 13. When JPM is initially validated, sign and date JPM cover page. Subsequent validations, sign and date below: SME/Instructor Date SME/Instructor Date

## **Revision Record (Summary)**

#### **Revision Record (Summary)**

**Revision 00:** Developed for 2016 ILT NRC exam (Class 14-1). This JPM is based on existing JPM LS-053-I-A. This JPM is venting for high Primary Containment pressure, vice high H2 as was the case in LS-053-I-A. The actions are the same for both JPMs. The reasons for venting and desired outcomes are different. Therefore, this is not considered a new JPM. It is a revised Bank JPM.

#### Revisions to LS-053-I-A

Revision 00, New JPM

Revision 01, JPM revised to reflect procedure revisions.

Revision 02, JPM revised to reflect procedure and K/A revisions.

#### SIMULATOR SETUP INSTRUCTIONS

- 1. **RESET** the Simulator to IC 21.
- NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.
- 2. Trip Latch HPCI.
- 3. **INSERT** malfunctions to break the D and E Main Steam Relief Valves above the water line. imf ms16d imf ms16e
- INSERT a malfunction to erode the D Main Steam Relief Valve seat 15%. imf ms06d 15 (This will maintain a high DW pressure such that the examinee gets feed back from their actions.)
- 5. OVERRIDE the AO 1-1601-60, "TORUS 18-INCH VENT" closed. ior dihs1160160 close
- 6. MANUALLY OPEN the "D" and "E" Main Steam Relief Valves on the 901-3 panel.
- 7. **PLACE** the RX Mode switch to SHUTDOWN.
- 8. Secure the 1A and 1C RFPs and close the Feed Reg Isolation Valves.
- 9. Secure the 1B Condensate Pump.
- 10. **MONITOR** DW pressure on the 901-3 panel.
- 11. WHEN DW pressure reaches ~55 psig, THEN CLOSE "D" and "E" Main Steam Relief Valves
- 12. **ALLOW** the DW pressure to stabilize. The DW pressure should remain between 45 and 55 psig.
- 13. Silence the DW/T Vacuum breaker alarms. bat sv
- 14. WHEN the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 15. This completes the setup for this JPM.

- A transient has occurred on Unit One resulting in high Drywell Pressure
- The US has determined the need to vent the Primary Containment to prevent exceeding the Primary Containment Pressure Limit (PCPL)
- All available Radwaste and Turbine Building Exhaust Fans are operating

#### **INITIATING CUE**

Vent the Primary Containment in accordance with QCOP 1600-13 and establish a Primary Containment pressure band of 45 to 50 psig.

It is "OK to exceed release rate limits."

# (If the examinee elects to use the procedure instead of the Hard Card, provide a blank copy of QCOP 1600-13 when the procedure is located)

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section at the bottom of the page. The comment section should be used to document the reason that a step is marked as unsatisfactory and to document unsatisfactory performance relating to management expectations.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

# Revision Record (Summary)

**Revision 00,** This is a new JPM written for the 2016 ILT NRC Exam.

#### SIMULATOR SETUP INSTRUCTIONS

1. Reset the simulator to IC-21

NOTE: This JPM is performed inside the simulator panels and can be done in any IC. The examiners must verify that this JPM is compatible with other JPMs that are scheduled to be run concurrently.

#### 2. Manual Actuations:

None

3. Malfunctions:

None

4. Remotes:

None

5. Overrides:

None

6. Equipment:

Four (4) Switchable Jumpers and Four (4) TCC tags.

- 7. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 8. This completes the setup for this JPM.

- Unit 1 is operating steady state at 80% power.
- The "A" RPS MG set has been returned to service following repairs to the feed breaker.
- The control room has made preparations for re-energizing RPS A from its normal feed.
- Equipment Operators in the Aux Electric Room have requested the control room to perform step C.12 of QCOP 7000-03.
- The Unit Supervisor has authorized installation of the OPRM jumpers on RPS B.
- Short Duration Time Clocks (SDTC) for Tech Spec LCOs 3.3.1.3 Condition A and 3.3.1.3 Condition B have been started.
- An Equipment Status Tag (EST) has been placed on the 901-5 panel stating OPRM trips on "B" RPS are bypassed.
- Continuity checks have been performed on the jumpers.
- This JPM is NOT time critical.

#### INITIATING CUE

Install jumpers to bypass RPS "B" OPRM trips per QCOP 7000-03 Attachment A.

Provide examinee with: A copy of QCOP 7000-03 signed off through step C.12.g.

Four (4) switchable jumpers with banana type connectors.

Four (4) TCC tags.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

STEP	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number	
Attach A 1.a.	Notify Unit Supervisor of jumper installation	Informs the Unit Supervisor of jumper installation on RPS "B" bypassing OPRM trips. OR				
		Determines completion from Initial Conditions.

# **Revision Record (Summary)**

Revision 00, This JPM was developed for the 2016 ILT NRC Exam.

### SIMULATOR SETUP INSTRUCTIONS

- 1. Reset the simulator to IC 21.
- NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.
- 2. Verify the 1B RHR HX SW FLOW SELECT switch is in NORM.
- 3. Start up the 1C and 1D RHRSW pumps per QCOP 1000-04, step F.2.b-c.
- 4. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 5. This completes the setup for this JPM.

- The 1C and 1D RHRSW pumps were started earlier this shift at the request of Engineering and the CMO group for performance monitoring.
- Both groups have collected the data and are now requesting the 1B RHRSW Heat Exchanger flow reversed and both RHRSW pumps placed in operation.

### **INITIATING CUE**

Place the 1B RHR Heat Exchanger in REVERSE FLOW and restart the 1C and 1D RHRSW pumps per QCOP 1000-04.

### Provide examinee with: A blank copy of QCOP 1000-04.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

## Information For Evaluator's Use:

UNSAT requires written comments on respective step.

# Revision Record (Summary)

- Revision 00, New JPM developed for ILT 09-1 NRC Exam.
- **Revision 01**, JPM revised for procedure changes.
- **Revision 02,** JPM revised for procedure changes.
- **Revision 03,** Taken from JPM Bank (LS-082-I-A) and used on 2016 ILT NRC Exam. Revised JPM number, updated template, and Evaluator notes.

### SIMULATOR SETUP INSTRUCTIONS

1. Reset the simulator to IC-18

NOTE: It is okay to use a similar IC to the IC listed above, provided the IC actually used is verified to be compatible with this and other JPMs that are scheduled to be run concurrently.

- 2. Take the following actions:
  - Start the 2A Service Water Pump.
  - · Prevent reclosure of the Bus 15 Main Feed Breaker: imf ed06a
  - Trip T-12 using the command: imf ed02
  - Insert a manual reactor scram and place the Mode Switch in Shutdown.
  - Verify the U-1 and U1/2 EDG are supplying the ECCS Busses.
  - · Restore RPS A and B from the normal feeds: irf rp28r reset, irf rp29r reset
  - · Backfeed Bus 13 and Bus 14.
  - Allow the simulator to stabilize, i.e. RPV water level approx. 0 inches (use SSMP if necessary), and RPV pressure stable at < 1060 psig.</li>
  - Perform the following steps of QCOA 6100-03, D.3, D.15, D.18, D.23, D.24, and D.28.
  - Start the 1/2 Instrument Air Compressor.
  - Start the 2A Service Air Compressor.
  - · Acknowledge annunciators initially and throughout the JPM.
  - Snap the setup to IC-0 or any other available IC.
- 3. Prepare a copy of QCOA 6100-03 signed off as complete, N/A, or in progress (circled), as appropriate up to step D.29.
- 4. One blank copy of QOP 6700-02.
- 5. When the above steps are completed for this and other JPMs to be run concurrently then validate, if not previously validated, the concurrently run JPMs using the JPM Validation Checklist.
- 6. This completes the setup for this JPM.

- A loss of offsite power has occurred on Unit 1.
- The Unit Supervisor has entered QGA 100 and directed actions to control RPV water level and pressure.
- Actions have been completed per QCOA 6100-03, Loss of Offsite Power up to step D.29.
- Hard Cards are authorized.
- The Unit Supervisor has directed you to resume Electric Plant restoration activities.

#### **INITIATING CUE**

Re-energize Bus 15 and Bus 17 from their Normal Feeds per QCOA 6100-03, step D.29.

Do NOT energize Bus 16 due to a Bus fault.

Notify the Unit Supervisor when Bus 15 and Bus 17 are energized.

#### Provide examinee with: A marked up copy of QCOA 6100-03.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

# Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number	
QCOA 6100-03 Step 29.a <u>OR</u> QOA 6700-01 Hard Card Step 1	Close Bus 15 Main Feed Breaker	Places Bus 15 c/s to the NAT position to clear the AUTO TRIP. THEN Places Bus 15 c/s to the NAC position.				
CUE:	The Bus 15 Main Feed Breaker will not close. If the examinee reports this and asks for direction, as the Unit Supervisor state: "Continue efforts to energize Bus 15"					
CUE:	If an EO is dispatched to investigate the Bus 15 Main Feed Breaker, then report back as appropriate from either: Bus 13 cubicle 1, "BUS 13 TO XFORMER 15 FEED BKR OR Bus 15 cubicle 2B, "BUS 13 TO TRANSFORMER 15" "EMs are here and they have identified a problem with the closing spring and are unable to charge it. There are no other problems preventing Bus 15 from being energized,"					
* QCOA 6100-03 Step 29.c       Close Bus 17 Main Feed Breaker       Places Bus 17 c/s to the NAT position to clear the AUTO TRIP.						
EVALUATOR NOTE: The task may be accomplished by using the Hard Card (QOA 6700-01) <u>OR</u> QOP 6700-02. If necessary, provide a copy of QOP 6700-02 when located.						

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
QOA 6700-01 Hard Card Step 1 <u>QR</u> QOP 6700-02 Step F.1.d.(1)	Verify closed the Bus 17 Main Feed breaker.	Verifies the Bus 17 Main Feed Breaker indications: - CLOSED light lit - OPEN light out - Bus 17 LIVE light lit			
QOA 6700-01 Hard Card Step 2.a <u>OR</u> QOP 6700-02 Step F.1.d.(2)	Verify open Bus 15 Main Feed Breaker.	Verifies Bus 15 Main Feed Breaker OPEN and AUTO TRIP lights are lit OR Places Bus 15 c/s to NAT and verifies breaker OPEN light is lit.			
QOA 6700-01 Hard Card Step 2.c <u>OR</u> QOP 6700-02 Step F.1.d.(3)	Verify open Bus 15 to Bus 16 Tie-Breaker.	Verifies Bus 15 to Bus 16 Tie- Breaker indications: - OPEN light lit - CLOSED light out

# **Revision Record (Summary)**

Revision 00, New JPM developed for the 2016 ILT NRC Exam.

- An Extended Loss of AC Power (ELAP) event was declared several hours ago by the Shift Manager.
- The Unit 2 125 VDC Battery Bus voltage is reading 105 VDC as indicated on the 902-8 panel.
- Several delays have been encountered in deployment of the FLEX Generator.
- The Unit Supervisor has determined the 125 VDC Alternate Battery is required to restore system voltage.
- You have been issued a Fire Lock Key and a screwdriver.
- 100 ft. of cable fitted with red and black connectors on each end, has been staged at the Junction Box in the Battery Charger Room.
- This JPM is NOT time critical.

### **INITIATING CUE**

Connect the Unit 2 125 VDC Alternate Battery to 125 VDC System per QCOP 0050-15, step F.4.

### Provide examinee with a marked up copy of QCOP 0050-15.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

###

# **Revision Record (Summary)**

**Revision 00,** This JPM was developed for the 2016 ILT NRC test. It is a Safety Function 9, Alternate Path in- plant JPM.

- Units 1 and 2 are operating at rated power.
- The Control Room HVAC B Train is to be placed in operation to support maintenance activities on the A Train.
- Control Room Train A HVAC is currently in operation.
- The 1A RHRSW pump has been started per QCOP 1000-04.
- An EO has verified the valve positions for step F.3.e.(2a-c) of QCOP 5750-09.
- Mechanical Maintenance is in standby to determine if refrigerant needs to be added.
- The US has directed you to locally start the B AHU. Do NOT run the Air Filtration Unit (AFU).
- This JPM is NOT time critical.

#### **INITIATING CUE**

Place the Control Room B Train HVAC in operation per QCOP 5750-09 step F.3. Contact Mechanical Maintenance when ready for the refrigerant check.

#### Provide the examinee with a marked-up copy of QCOP 5750-09.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

		[	1

# JOB PERFORMANCE MEASURE VALIDATION CHECKLIST

NOTE:		of this checklist should be performed upon initial validation.
	Prior to	JPM usage, revalidate JPM using steps 9 through 13 below.
<u>RJV/S/</u>	1.	Task description and number, JPM description and number are identified.
<u>RJV/S/</u>	2.	Knowledge and Abilities (K/A) references are included.
<u>RJV/S/</u>	3.	Performance location specified. (in-plant, control room, simulator, or other)
<u>RJV/S/</u>	4.	Initial setup conditions are identified.
<u>RJV/S/</u>	5.	Initiating cue (and terminating cue if required) are properly identified.
<u>RJV/S/</u>	6.	Task standards identified and verified by SME review.
<u>RJV/S/</u>	7.	Critical steps meet the criteria for critical steps and are identified with an asterisk (*).
<u>N/A</u>	8.	If an alternate path is used, the task standard contains criteria for successful completion.
<u>RJV/S/</u>	9.	Verify the procedure(s) referenced by this JPM reflects the current revision: Procedure <u>QCOP 4100-03</u> Rev: <u>20</u> Procedure <u>Rev:</u> Rev: <u>COP 4100-03</u> Rev: <u>COP 4100-0</u>
<u>RJV/S/</u>	10.	Verify cues both verbal and visual are free of conflict.
<u>RJV/S/</u>	11.	Verify performance time is accurate
<u>N/A</u>	12.	If the JPM cannot be performed as written with proper responses, then revise the JPM.
<u>RJV/S/</u>	13.	When JPM is initially validated, sign and date JPM cover page. Subsequent validations, sign and date below:

## **Revision Record (Summary)**

ILT 2016 NRC Examination Revision 00, Revised to new format.

**ILT 2009 NRC Examination Revision 00,** This JPM is developed IAW guidelines established in NUREG 1021 Rev 9 ES-301 and Appendix C. This JPM meets the criteria of Category B.1 "Control Room Systems," for RO/SRO candidates.

This JPM was based on bank JPM LP-002-II, Rev. 18.

JPM revised to match procedure revision and update to latest JPM template.

SRRS: 3D.105 There are no retention requirements for this section.

- You are an extra operator.
- Both Diesel Fire pumps are in a standby condition per QCOP 4100-03, Section F.1.a.
- The Fire Marshall has requested that the ½ A Diesel Fire Pump be started locally for observation.
- There are no AUTO start signals present.
- You have been issued a fire protection key.
- This JPM is NOT time critical.

#### INITIATING CUE

Locally start-up the 1/2 A Diesel Fire Pump in the Test Mode, establish proper pressure, and verify proper operation per QCOP 4100-03.

Contact the Fire Marshall when the 1/2A Fire Diesel is running.

**Provide the examinee**: A copy of QCOP 4100-03 with Prerequisite C.1 and Step F.1.a-b signed off.

Fill in the JPM Start Time when the student acknowledges the Initiating Cue.

#### Information For Evaluator's Use:

UNSAT requires written comments on respective step.

\* Denotes critical steps.

Number any comments in the "Comment Number" column on the following pages. Then annotate that comment in the "Comments" section. The comment section should be used to document: the reason that a step is marked as unsatisfactory, marginal performance relating to management expectations, or problems the examinee had while performing the JPM. Comments relating to procedural or equipment issues should be entered and tracked using the site's appropriate tracking system.

Some operations that are performed from outside of the control room may require multiple steps. These items may be listed as individual steps in this JPM. It is acceptable for the candidate to direct the local operator to perform groups of procedure steps instead of calling for each individual item to be performed.

The timeclock starts when the candidate acknowledges the initiating cue.

JPM Start Time:

			1		
<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number
F.1.b.	Verify closed MO 1/2-3906.	Contacts CR to verify MO 1/2-3906 valve is closed.			
CUE:	As the Control Room Oper	ator, state, "The MO 1/2-3906 va	lve is	closed	ł."
F.1.c.(1)	Open the 1/2A Diesel Fire PMP MIN FLOW VLV.	Unlocks the 1-4199-6 valve and rotates handwheel counter-clockwise.			
CUE:	"You cannot rotate the har	ndwheel any further."			
*F.1.d.(2)	Start the 1/2 A Diesel Fire Pump by placing control switch to TEST.	Positions 1/2 A Diesel Fire Pump control switch to TEST.			
CUE:	"The diesel is running."				
F.1.d.(3)	Verifies engine cooling water outlet flow to the intake flume funnel	Checks the intake flume funnel for cooling water flow.			
CUE:	"There is flow into the funi	nel."			
*F.1.d.(4)(a)	Throttles the 1/2A DIESEL FIRE PMP MIN FLOW VLV to attain proper discharge press.	Rotates 1-4199-6 valve hand wheel clockwise to establish 140 to 145 psig disch. press on PI 1/2-4141-2A.			
CUE:	When asked, point to 140 psig on PI 1/2-4141-2A and state, "the pressure is here" after the valve is throttled.				
	If asked before the valve is	throttled, point to 100 psig.			

<u>STEP</u>	<u>ELEMENT</u>	<u>STANDARD</u>	SAT	UNSAT	Comment Number			
F.1.d.(5)	Verify normal parameters.	Verifies oil press. <sup>3</sup> 40 psig and engine temp. is < 200°F.						
CUE:	<ul> <li>When prompted, point to the value for each gauge and state, "the pressure is here."</li> <li>Oil pressure is 60 psig,</li> <li>Water temp. is 180° F.</li> </ul>							
CUE:	The examinee informs the Fire Marshal that the 1/2A Fire Diesel is operating properly.							
CUE:	The Fire Marshall informs you that maintenance personnel want to walk down the system prior to placing the system in a shutdown lineup and it will be approximately 1 hour before you can place the system in a shutdown condition.							
EVALUATOR NOTE: The examinee should inform you that the task is complete.
