**Subject:** Dominion Fleet: Revision 21 to the Nuclear Facility Quality Assurance Program Description Topical Report DOM-QA-1 (CAC Nos. MF8128 thru and MF8135)

By letter dated July 11, 2016 (Agencywide Documents and Access Management System (ADAMS) Accession No. ML16196A292), Dominion Energy Kewaunee, Inc., Dominion Nuclear Connecticut, Inc., and Virginia Electric and Power Company (the licensee) requested for the approval of proposed Revision 21 to the Nuclear Facility Quality Assurance Program Description Topical Report DOM-QA-1 prior to implementation since the proposed revision would reduce certain commitments. The purpose of this e-mail is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this report. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed the submittal and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please do not hesitate to contact me.
