U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001
ATTN: Document Control Desk

Subject; NON 99901468/2016-201-01

To whom it may concern:

This notification is to respectfully request an extension for our response to the subject NON 99901468/2016-201-01 for an additional 30 days as outlined in the related Inspection Report 99901468/2016-201. Although we have completed our investigation of this issue and identified the improvement actions required, we have not yet reviewed all of the actions or completed documentation of the full response for submittal.

Our facility is in the process of a full business transfer to a sister site in Jacksonville, FL. During this time, we have had several technical personnel in the process of moving households, etc. to FL as well as supporting multiple other audits at both sites to maintain or achieve required regulatory certifications for production. We have not had all the right personnel available at the same time recently to complete this review.

Our Inspection report was received on June 15, 2016. The original 30 days would end on July 15; and the proposed extension would end on August 15, 2016. We intend to submit the response by that date.

Thank you for your attention and consideration in this matter.

Sincerely,

A handwritten signature in cursive script that reads "Anne Sullivan".
