## August 25, 2016

Mr. Ronald A. Jones, Vice President South Carolina Electric & Gas Company New Nuclear Deployment P.O. Box 88 Jenkinsville, SC 29065

SUBJECT: ACCEPTANCE REVIEW OF SOUTH CAROLINA ELECTRIC & GAS

COMPANY'S REQUEST FOR LICENSE AMENDMENT (LAR 14-11) AND EXEMPTION FOR THE VIRGIL C. SUMMER NUCLEAR STATION, UNITS 2 AND 3: DEBRIS SCREEN RELATED DIMENSIONS (CAC NO. RQ0449)

Dear Mr. Jones:

By letter dated August 12, 2016, (Agencywide Documents Access and Management System Accession No. ML16225A437), the South Carolina Electric & Gas Company (SCEG/licensee), on behalf of itself and the South Carolina Public Service Authority (Santee Cooper) submitted a request for a license amendment and an exemption (LAR 14-11) for the Combined License (COL) Numbers NPF-93 and NPF-94, for the Virgil C. Summer Nuclear Station, Units 2 and 3, respectively. The requested amendment proposes to depart from Tier 2 information in the Updated Final Safety Analysis Report (UFSAR) (which includes the plant-specific design control document (DCD) Tier 2 information) and involves changes to COL Appendix C information and to the corresponding plant-specific Tier 1 information. Specifically, the requested amendment proposes to depart from information in the UFSAR identifying the frontal face area and screen surface area for the In-Containment Refueling Water Storage Tank (IRWST) screens, the location and dimensions of the protective plate located above the containment recirculation (CR) screens, and increasing the maximum Normal Residual Heat Removal System flowrate through the IRWST and CR screens.

SCE&G has also requested an exemption from the provisions of Title 10 of the *Code of Federal Regulations* (10 CFR) Part 52, Appendix D, Section III.B, "Design Certification Rule for the AP1000 Design, Scope and Contents," to allow a departure from the elements of the certification information in Tier 1 of the generic DCD.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of the LAR. The staff performed the acceptance review to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. Through this review, the staff also determined whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

R. Jones - 2 -

Consistent with Section 50.90 of the 10 CFR, an amendment to the license must fully describe the changes requested, and follow as far as applicable, the form prescribed for original applications. Section 52.79 of the 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application against the regulatory requirements and has concluded that it provides sufficient technical detail to enable the NRC staff to complete its detailed review and make an independent assessment regarding the acceptability of the proposed changes in terms of regulatory requirements and the protection of public health and safety and the environment.

Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that affect the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

If you have any questions, please contact me at (301) 415-3249 or <a href="mailto:Ruth.Reyes@nrc.gov">Ruth.Reyes@nrc.gov</a>.

Sincerely,

/RA/

Ruth C. Reyes, Project Manager Licensing Branch 4 Division of New Reactor Licensing Office of New Reactors
