Subject: Columbia Generating Station, Acceptance of Requested Licensing Action: CAC No. MF8219, Application to adopt (NEI) 99-01, "Development of Emergency Action Levels for Non-Passive Reactors," Revision 6.

Ms. Williams,

By letter dated July 28, 2016, Agencywide Documents Access and Management System, Accession number ML 16210A528, Energy Northwest for Columbia Generating Station submitted a license amendment request for an Emergency Action Level Scheme change to adopt Nuclear Energy Institute (NEI) 99-01, "Development of Emergency Action Levels for Non-Passive Reactors," Revision 6.

The purpose of this email is to provide the results of the U.S. Nuclear Regulatory (NRC) staff's acceptance review of this license amendment. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed license amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me.

Thank you,

John Klos
