

Docket No. 50-346

License No. NPF-3

Serial No. 1-101

November 1, 1979

RICHARD P. CROUSE
Vice President
Energy Supply
(419) 239-5221

Mr. James G. Keppler
Regional Director, Region III
Office of Inspection and Enforcement
U. S. Nuclear Regulatory Commission
799 Roosevelt Road
Glen Ellyn, Illinois 60137

Dear Mr. Keppler:

This letter is a follow-up to Toledo Edison's response to IE Bulletin 79-05C of July 26, 1979 (Log No. 1-214).

Attached are Davis-Besse Nuclear Power Station Unit 1 drawing Nos. SK-E-416, Revision 1 and SK-E-417, Revision 0. These drawings provide details of the design as well as the criteria and system description of the proposed safety grade automatic reactor coolant pump trip (ARCPT).

The current project schedule for installation would be during the first refueling outage twelve months after the NRC's formal approval.

It is noted that an interim control grade ARCPT was submitted requesting your approval as Attachment C to Toledo Edison's letter of August 29, 1979 (Serial No. 1-85). Installation of the interim design could be accomplished within seven days of formal NRC approval.

The guidelines related to item 5 are currently under Toledo Edison review and will be submitted by November 9, 1979. These guidelines address the cases of inadequate core cooling identified in section 2.1.9 of NUREG 0578, "TMI-2 Lessons Learned Task Force Status Report and Short-Term Recommendation".

Yours very truly,

A handwritten signature in dark ink, appearing to read 'R. P. Crouse'.
