

Attachment 1 to Holtec Letter 5021033

LAR 1040-3, REVISION 0

SUMMARY OF PROPOSED CHANGES

Proposed Change #1

Include the 24PT1-DSC as an approved canister to be stored within the HI-STORM UMAX Storage System.

Reason for Proposed Change #1

The change allows storage of a different kind of canister in the HI-STORM UMAX System, which can be a universal storage system for all dry storage canisters.

Justification for Proposed Change #1

The 24PT1-DSC has been fully evaluated in the HI-STORM UMAX System, as documented in the new HI-STORM UMAX FSAR Supplement I, submitted with this application. This supplement is formatted like the main body of the HI-STORM UMAX FSAR, with fourteen chapters, but only addresses the applicable safety analyses related to the storage of the 24PT1-DSC in the UMAX VVM. New appendices C and D are also added to the CoC for the technical specifications and approved contents for the 24PT1-DSC. The full set of safety analyses presented in Supplement I demonstrate that the 24PT1-DSC can be safely transferred to and stored in the HI-STORM UMAX System.
