**License SNM-1227**  
**Docket 70-1257**

**Subject: Required Reporting of Effluents per 10 CFR 70.59**

As required by 10 CFR 70.59, AREVA Inc. is reporting discharges of radioactive materials in the effluents from its nuclear fuels fabrication plant on Horn Rapids Road in Richland, Washington for the period from January 1 through June 30, 2016.

If there are any questions, please contact me at (509) 375-8355.

Very truly yours,

A handwritten signature in black ink, appearing to read 'Y. R. Sakach'.

\* Estimated average minimum detectable concentrations for 7-day sampling.

\*\* There are several sampled effluent streams discharged via this stack, MDC listed is the highest of any sampled effluent stream

\*\*\* SWUR Facility down during covered period; K-55 not operated.

Gaseous Effluent January 1- June 30, 2016				
Stack	Average Concentration (μCi/ml)	Average MDC (μCi/ml)*	Quantity (μCi beta)**	Flow (m <sup>3</sup> )
Mixed Fission and Activation Corrosion Products- Based upon Gross Beta results				
K52	7.68E-16	5.02E-16	0.03	4.38E+07
<b>TOTAL</b>			<b>0.03</b>	

\* Estimated average minimum detectable concentration for 7-day sampling.

Principal isotopes (by activity) are estimated to be Co-60 (~66%), Mn-54 (~20%), and Sb-125 (~9%).

Liquid Effluent*				
January 1 – June 30, 2016				
Constituent	Concentration ( $\mu\text{Ci/ml}$ )	LLD ( $\mu\text{Ci/ml}$ )	Quantity (Ci)	Liquid Volume ( $\text{m}^3$ )
Soluble U	1.08E-08	***	0.0004	3.45E+04
Insoluble U**	5.75E-08	***	0.0020	
Tc-99	8.70E-08	***	0.0030	
Total Ci			0.0054	

- \* Combined liquid effluent released to City of Richland sewer system.
- \*\* The average concentration of insoluble uranium for the 6-month period was less than 50 ppb.
- \*\*\* These constituents are analyzed chemically via Inductively Coupled Plasma/Mass Spectroscopy (ICP/MS) as opposed to radiation counting. Laboratory detection limits for uranium and Tc-99 are generally 1 ppb and 5 ppt, respectively
