

October 3, 2016

The Honorable Lamar Alexander
Chairman, Subcommittee on Energy
and Water Development
Committee on Appropriations
United States Senate
Washington, DC 20510

Dear Mr. Chairman:

Enclosed is the August 2016 Monthly Congressional Status Report. The monthly status report is provided in accordance with Section 402(e) of the Energy and Water Development and Related Agencies Appropriations Act, 2016.

In addition, the Nuclear Regulatory Commission (NRC) section of the Joint Explanatory Statement that accompanied the Consolidated Appropriations Act, 2016, contains the following direction regarding reallocations of funding across business lines within the Nuclear Reactor Safety control point:

“The Commission is directed to report any transfer of more than \$500,000 across business lines, as identified in the budget request to the Committees on Appropriations of both Houses of Congress, as soon as practicable but not later than two weeks after the transfer is made.”

On August 31, we exceeded the threshold of \$500 thousand in funds reallocated between the business lines within the Nuclear Reactor Safety control point. Resources were reallocated from new reactors to operating reactors to fund high priority mission activities. The activities included \$6 thousand for the Integration of the Enterprise Project Management (EPM) system and the Replacement Reactor Program System (RRPS) and \$945 thousand for the Learning Transformation Initiative (LTI).

The new reactors resources reallocated to fund these activities support the analysis and requirements definition for the migration of the EPM system and RRPS for licensing and inspections activities. The LTI provides continued support of learning modernization activities such as power plant engineering, systems overview courses, probabilistic risk assessment basics for regulatory applications, and other critical courses.

The agency does not anticipate any programmatic impact in performing its mission due to the reallocation of funds from new reactors.
