TRAINING: No

REMARKS: IMC 2601, "Reactive Inspection Decision Making Process for Fuel Facilities," is an initial issuance. This IMC provides guidance for implementing Management Directive 8.3, "NRC Incident Investigation Program," at fuel cycle facilities and describes the reactive inspection decision-making process.

IMC 2604, "Licensee Performance Review," has been revised to add the option to conduct LPR public meetings remotely to facilitate participation and improve efficiency.

IMC 2630, "Mixed Oxide Fuel Fabrication Facility Construction Inspection Program" has been revised to update the inspection planning section to include consideration of NRC budgeted resources when scheduling inspections. This update completes implementation of SECY-16-0009 Enclosure 1 C-List Implementation Item #145. Also updated the resident inspector program section to include NRC management in determining the assignment of a resident inspector as needed.

IP 88070, "Plant Modifications," has been revised to remove the project manager role from the plant modification selection process as a result of FCSE project managers discontinuing the annual ISA summary and 70.72 review. Also the revision decreased the maximum expected resources from 120 to 80 hours.

IP 88117, "Facility Changes (License Application) and Change Process (10 CFR 70.72) (Pre-Licensing and Construction)," is an initial issuance. Researched commitments for the last four years and found none.
