SUBJECT: CLINTON POWER STATION, UNIT NO. 1 – ACCEPTANCE REVIEW
CONCERNING CHANGES TO ADMIN CONTROL SECTION (CAC NO.
MF8224)(RS-16-153)

Dear Mr. Hanson:

By letter dated July 28, 2016 (Agencywide Document Access and Management System (ADAMS) Accession No. ML16210A300), Exelon Generation Company, LLC (the licensee) submitted a license amendment request for Clinton Power Station, Unit 1 (CPS). The proposed amendment supports changes to the organization, staffing, and training requirements contained in Section 5.0 of the technical specifications after the license no longer authorizes operation of the reactor or placement or retention of fuel in the reactor pressure vessel. This proposed amendment also supports implementation of the Certified Fuel Handler training program. The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Section 50.90 of Title 10 of the *Code of Federal Regulations* (10 CFR), an amendment to the license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. Based on the information provided in your submittal, the NRC staff has estimated that this licensing request will take approximately 300-375 hours to complete. The

B. Hanson

- 2 -

NRC staff expects to complete this review in May 2017 . If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date (greater than a month) or significant changes in the forecasted hours (greater than 25 percent), the reasons for the changes, along with the new estimates will be communicated, during routine interactions with the CPS project manager.

These estimates are based on the NRC staff's initial review of the application and may change, due to several factors including requests for additional information, unanticipated addition of scope to the review, and review by NRC advisory committees or hearing-related activities. Additional delay may occur if the submittal is provided to the NRC in advance or in parallel with industry program initiatives or pilot applications. The licensee will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence. If you have any questions, please feel free to contact me at (301) 415-2315.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eva A. Brown', written in a cursive style.
