## **NRC Issues Final Environmental Review on License Renewal for Fermi 2 Nuclear Power Plant**

The Nuclear Regulatory Commission has published its final review detailing the environmental impacts of renewing the operating license of the Fermi 2 nuclear power plant in Michigan. The supplemental environmental impact statement contains the NRC staff's conclusion that the impacts would not preclude renewing the plant's license for an additional 20 years.

Fermi 2 is a boiling-water reactor located in Newport, Mich., about 25 miles northeast of Toledo, Ohio. It is currently licensed to operate through March 20, 2025. The operator, DTE Electric Co., submitted the renewal application April 30, 2014.

The report is Supplement 56 to NUREG-1437, Generic Environmental Impact Statement for License Renewal of Nuclear Plants. It is now available on the [NRC website](#). The NRC published a draft version of the report in November 2015 for public comment. The final report includes the staff's responses to the comments.

The [Fermi 2 license renewal application](#) and general information about [reactor license renewal](#) are available on the NRC website.
