Hi Geoff,

I think the proposed license looks good except for the point that we discussed earlier. My proposed wording for 2.B.3.f. is as follows:

f. to receive, possess, and use, but not to separate, in connection with operation of the facility, such byproduct material as may be produced by operation of the reactor, except for byproduct material produced in non-fueled reactor experiments which is permitted to be separated; and

Thank you,

Brycen

Please review the draft copy of the USGS renewal license (in excruciating detail!). Make sure everything is correct, as far as material types, amounts, conditions, etc. This license should be very similar to the current license. Note, LC 3.f, we added "non-fueled."

Thanks
