Re: NRC Vision and Strategy for Non-Light Water Reactor Mission Readiness

The NRC could review and license a non-LWR design today, if needed. The agency needs to be effective and efficient as it conducts its safety, security, and environmental protection mission, without imposing unnecessary regulatory burden. This requires the NRC to consider the effects of a more dynamic domestic environment and a globalized non-LWR industry. Furthermore, the NRC recognizes the benefits of having a flexible regulatory framework, allowing potential applicants to select a best-fit path towards regulatory reviews and decisions. Examples of these flexibilities are described in the draft document.

Without imposing unnecessary regulatory burden?

This sounds like the tail wagging the dog!
