NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D.C. 20555-0001

November 15, 2016

MEMORANDUM TO: Kevin Hsueh, Chief  
Licensing Processes Branch  
Division of Policy and Rulemaking  
Office of Nuclear Reactor Regulation

FROM: Joseph A. Golla, Project Manager */RA/*  
Licensing Processes Branch  
Division of Policy and Rulemaking  
Office of Nuclear Reactor Regulation

SUBJECT: SUMMARY OF AUGUST 2, 2016, GENERAL ELECTRIC/GLOBAL  
NUCLEAR FUELS TECHNOLOGY UPDATE PUBLIC MEETING

On August 2, 2016, the U.S. Nuclear Regulatory Commission (NRC) staff hosted a public meeting at the NRC headquarters in Rockville, Maryland, to discuss developing General Electric (GE)/Global Nuclear Fuels (GNF) fuels technologies and NRC regulatory processes. Attendees included representatives from GE Hitachi (GEH), Global Nuclear Fuels, Exelon, Southern Nuclear, the NRC's Advisory Committee on Reactor Safeguards, and the NRC's Office of Nuclear Reactor Regulation (NRR) staff. The NRR staff made four presentations. The subject of these presentations was the current revision of LIC-500, "Topical Report Process," NRC change process development, NRC anticipated transient without scram with instability (ATWSI) testing description, and redefined safety limit minimum critical power ratio (SLMCPR).

The Power Point slides that accompany these presentations as well as the meeting notice and agenda are available electronically at Agencywide Documents Access and Management System Package Accession No. ML16266A225. A list of meeting attendees is enclosed.

A portion of the meeting was closed to the public because GEH proprietary information was discussed. The subject of these discussions was Boiling Water Reactor Owner's Group SLMCPR technical specification simplification update, accident tolerant fuel, Title 10 to the Code of Federal Regulations 50.46 rule implementation plans, and TRACG-LOCA review and channel performance update. (TRACG-LOCA is a computer code used for loss-of-coolant accident analyses for boiling water reactors.)
