Inspections/Tests/Analyses

An inspection of the HSI resources available in the MCR for the MCR operators will be performed.

Acceptance Criteria

The HSI (at the time of plant startup) includes an alarm system, plant information system (nonsafety-related displays), wall panel information system, nonsafety-related controls (soft and dedicated), and computerized procedure system.

ITAAC Completion Description

An inspection of the Human System-Interface (HSI) resources available in the Main Control Room (MCR) for the MCR operators is performed to verify that the HSI (at the time of plant startup) includes an alarm system, plant information system (nonsafety-related displays), wall panel information system, nonsafety-related controls (soft and dedicated), and computerized procedure system.

The inspection of the HSI resources discussed above is performed per Inspection Procedure XXX (Reference 1) to confirm that the HSI resources available in the MCR for the MCR operators at the time of plant startup include an alarm system, plant information system (nonsafety-related displays), wall panel information system, nonsafety-related controls (soft and dedicated), and computerized procedure system.

The results of the inspection are documented in Inspection Report YYY (Reference 2) and confirm that the HSI resources available in the MCR for the MCR operators at the time of plant startup include an alarm system, plant information system (nonsafety-related displays), wall panel information system, nonsafety-related controls (soft and dedicated), and computerized procedure system. This report is available for NRC inspection as part of the ITAAC Completion Package (Reference 3).

List of ITAAC Findings
