September 2016 Excursion Report Summary, Cameco Resources, North Butte ISR Project, Permit 632

Dear Mr. Rogaczewski:

Power Resources, Inc. d/b/a/ Cameco Resources (Cameco) is submitting the September 2016 Monthly Excursion Report Summary for the North Butte ISR Project. Monitor Well NBM-031 was confirmed on excursion on September 22, 2016, exceeding the Upper Control Limits (UCL) in both Chloride and Alkalinity. Verbal notification was made to Wyoming Department of Environmental Quality (WDEQ) – Land Quality Division (LQD) on September 23, 2016 with written notification following in a letter dated September 27, 2016.

Attached please find sample results, concentration of UCL parameters and groundwater elevation, for Monitor Well NBM-031 for the report period of September 2016. Concentration in both chloride and alkalinity dropped below the UCL's for the September 27, 2016 sample event. A confirmation sample was collected the following day, September 28, 2016 as an internal check. As discussed with LQD, weekly sampling will continue until three (3) consecutive weekly samples show concentrations below the UCL's. Once this condition has been met, Cameco will provide LQD with a courtesy email stating that the regular sampling schedule has resumed. At this time, Cameco continues to investigate the likely cause of the excursion.

Please contact me at 307-358-6541, ext. 476 or Kenneth_Garoutte@cameco.com if you have questions.

Respectfully,

A handwritten signature in black ink, appearing to read 'Ken Garoutte', written in a cursive style.
