

Staff Feedback on RAI Responses

Input related to Question 3.7.1-3:

1. Contradiction in response – Suggest M1-M2 comparison be deleted and add M1-M3 comparison be added.

KHNP INPUT

The description and figures of comparison for M1-M2 are deleted and add comparison for M1-M3 in response to RAI. The Figure 3.7-9 through 3.7-11 and Figure 3.7-20 through 3.7-22 in DCD are revised also.

2. DCD revision – provide justification in DCD to make the discussion obvious.

KHNP INPUT

The justification is described in chapter 3.7.1.1.2 and 3.7.1.1.3.

3. Equation – Use a different subscript (e.g. change T_{100} and T_0 something else – define symbols in the text)

KHNP INPUT

The equivalent stationary strong motion duration is changed from T_s^i to $T_{s_e}^i$. The subscript “_e” adds to the related variable used in equation and description to avoid confusion.
