**Subject:** NRC's LIC-109 Acceptance Review for LAR-246 (CACs MF8221 and MF8222)

Hi Mitch, Olga, & Paul,

By letter L 2016-246 dated August 3, 2016 (Agencywide Documents Access and Management System Accession No. ML16230A003), Florida Power & Light Company (the licensee) requested amendments to the Technical Specifications (TSs) of Renewed Facility Operating License (RFOL) Nos. DPR-31 and DPR-41 for Turkey Point Nuclear Generating Unit Nos. 3 and 4, respectively. The U.S. Nuclear Regulatory Commission (NRC) staff performs acceptance reviews of applications to determine if the scope and depth of technical information is sufficient for the staff to complete its technical reviews. The acceptance reviews also intend to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

By letter dated September 23, 2016 (ADAMS Accession No. ML16265A075), the staff informed the licensee that the staff would need supplemental information to complete its acceptance review of the licensee's application. By letter L 2016 183 dated October 4, 2016 (ADAMS Accession No. ML16291A495), the licensee supplemented its application. The staff concluded that the licensee's submittal, as supplemented, provides technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which the NRC staff identifies issues that affect its ability to complete the detailed technical review despite completion of an adequate acceptance review. If the NRC staff needs additional information, it will notify the licensee by separate correspondence.

The staff has estimated that it will take approximately 500 hours to complete this licensing request and that it will complete its review by the licensee's requested date of August 3, 2017. These estimates are based on the NRC staff's initial review of the application and could change because of several factors, such as requests for additional information, unanticipated addition of application scope, review by NRC advisory committees, or hearing related activities. Additional delay may occur if the submittal is provided to the NRC in advance of or in parallel with industry program initiatives or pilot applications. If complexities or challenges during the review cause significant changes to the estimated hours or completion date, the assigned project manager will communicate the new estimates and reasons for the changes to the licensee during routine interactions.

If you have any questions, please contact me at (301) 415-0489.
