Gentlemen:

The Nuclear Regulatory Commission, as part of its assessment of environmental impacts associated with the operation of Diablo Canyon Nuclear Power Plants Units 1 and 2, has stated its intention to issue an Addendum to the Final Environmental Statement that was published in May 1973. At the prehearing conference on April 19, 1975, the NRC staff proposed an issuance date of on or about June 1, 1975, contingent upon the receipt of pertinent information from the applicant in a timely manner.

The information required by the staff was described in our letter to you of January 26, 1975, and principally covered the conditions that were placed on the construction permits. The staff also requested information related to testing the cooling water system. Because of the unforeseen detrimental impacts resulting from these tests, our need for a full description of these as well as the physical model tests has increased.

Inasmuch as the date, April 14, 1975, on which the staff expected receipt of the requested information has passed without response, the issuance date of the Addendum is in jeopardy. In addition, the environmental review cannot be completed until the Environmental Technical Specifications for the Diablo Canyon Units have been approved by the staff. Our comments on a draft version of these specifications were given to your staff last fall.

Will you please notify me by May 1, 1975, the schedule for submission of the information requested in our January 26 letter.

Sincerely,

Original signed by
Gordon K. Dicker
