Dear Mr. Stolz:

We have been informed by Westinghouse Electric Corporation that a logic inconsistency exists in two of the computer codes used in their LOCA ECCS Evaluation Model. The computer codes are SATAN-VI⁽¹⁾ and LOCTA-IV⁽²⁾. All versions of the Westinghouse Appendix K, 10 CFR 50.46 evaluation model are affected^(3,4,5,6). Therefore, our analysis on record is also affected.

This logic inconsistency involves the interface between the zirconium-water reaction heat generation calculation and the heat conduction equation. Both the zirconium-water reaction equation (Baker-Just) and the heat conduction equation are solved correctly. However, the heat conduction equation uses a volumetric heat flux from the zirconium-water reaction calculation. The output of the zirconium-water reaction calculation is a surface heat flux. This surface heat flux is modified by dividing it by the thickness of the radial mesh size between the surface temperature node and the first node inside the clad to obtain a volumetric heat flux. It is this calculation which was performed incorrectly. The inconsistency underestimates the volumetric heat flux due to zirconium-water reaction by a factor of 2.

The presence of this logic inconsistency has been verified by visual inspection of the computer codes and by performing energy balances on some sample calculations. Correction of this error will result in higher calculated peak clad temperatures.

Westinghouse Electric Corporation has studied the effect of correcting this error on calculated peak clad temperature. In addition to correcting this error, some beneficial model changes were also studied. The result of their studies indicate a net increase in peaking factor.

300/10

Mr. John F. Stolz

2

May 16, 1978

Some details of these calculations follow.

Westinghouse Electric Corporation has proposed the use of the following improvements to the October 1975 version of their evaluation model:

1. Change the transition boiling correlation used during blowdown from the W Transition Boiling Correlation to the Dougall-Rohsenow. Both correlations have been documented by Westinghouse⁽³⁾ and both are termed "acceptable" in Appendix K of 10 CFR 50.46 and in the NRC SER for the Westinghouse evaluation model.
2. Use of an emissivity in the refill radiation heat transfer model of 0.9⁽⁷⁾.
3. Multiply the volumetric heat flux from the zirconium-water reaction calculation by a factor of 2 to correct the logic inconsistency.
4. Use of maxi-convolution to improve the peaking factors being calculated⁽⁸⁾.

All of the modifications were discussed with the Staff on March 29, 1978. We understand that it will take the Staff 3 months to review all of these model changes. We will work with Westinghouse until then to arrive at a new approved LOCA ECCS Evaluation Model. At that time we will submit to the Nuclear Regulatory Commission a schedule for reanalysis of the present limiting break size with the new model. Until then no further analysis is planned.

Very truly yours,

Philip A. Green, Jr.

Attachment

CC w/attachment: Service List

11-11-68

1. The first part of the document discusses the general situation of the company and the results of the previous year. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

2. The second part of the document discusses the company's financial performance. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

3. The third part of the document discusses the company's marketing strategy. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

4. The fourth part of the document discusses the company's production process. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

5. The fifth part of the document discusses the company's human resources. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

6. The sixth part of the document discusses the company's future plans. It mentions that the company has achieved a significant increase in sales and profit, which is a result of the efforts of all employees.

10/10/10

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is crucial for the company's financial health and for providing reliable information to stakeholders.

2. The second part of the document outlines the specific procedures for recording transactions. It details the steps from initial entry to final review, ensuring that all necessary information is captured and verified.

3. The third part of the document addresses the role of the accounting department in this process. It highlights the need for clear communication and collaboration between different departments to ensure the accuracy of the data.

4. The fourth part of the document discusses the importance of regular audits and reviews. It explains how these activities help to identify any discrepancies or errors and ensure that the records are up-to-date and accurate.

5. The fifth part of the document provides a summary of the key points discussed and offers some final thoughts on the importance of maintaining accurate records.
