Ben C. Rusche, Director  
Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Rusche:

Thank you for the material that you sent me dated 11-11-76.

The material you have sent me will help me when I type up the final draft of my essay on electricity and the risks we must take to ensure ourselves enough of it in the future.

I was glad to hear that the Diablo Canyon Plant has not been licensed yet. I have been hearing about it on the radio and I had assumed that it was in full operation, so the information you have sent me was needed to mention it in my paper. It would seem to me that the fault it is situated near is much too dangerous to let even building of the plant get under way. It would be a shame if the building went to waste--but nothing must engender the lives of thousands of people so much that we can't take the time to figure what must be done in order to protect them. I say it's a shame, because now consumers will pay the penalty of its construction, even if it hasn't been operating.

Thank you for the information on "nukes". The terminology is catching, and the extra information you have sent me will be a great help.

Sincerely,

*Charles Hearn*
