## A TASK FORCE STUDY

5101 Ojai Drive  
Bakersfield CA 93306

20 February 1976

Hon. William Anders, Chairman  
NUCLEAR REGULATORY COMMISSION  
Washington D.C. 20555

Dear Chairman Anders:

RE: PROPOSED SAN JOAQUIN NUCLEAR  
PROJECT -- NRC FILE #499

We commend the staff of the Nuclear Regulatory Commission for your diligent investigation into the earthquake fault conditions at the site of the proposed San Joaquin Nuclear Project in Kern County, California (NRC #499).

Our review of documents in the local public library indicates that the Commission has not wavered in its determination to receive accurate and complete information from the applicant before considering issuance of preliminary site approval in regard to limited issues including earthquake safety.

The recent discovery of the importance of the Hosgri Zone Fault offshore the Diablo Canyon facility in California reportedly imperils licensing of that facility when construction is completed.

Clearly, the cautious approach being taken by the Commission in connection with the San Joaquin Project is very wise.

It is always less expensive to learn about major siting deterrents, such as earthquake dangers, before binding commitments are made or any site work commences.

Yours truly,

PROJECT LAND USE, INC.
