Temporary Job Site Inspection									
		PROGRAM SO	COPE						
This was a routine inspection of a small community hospital authorized to use byproduct material in 10 CFR 35.100 and 35.200. The licensee staffed its nuclear medicine department with two full-time technologists who performed studies daily. The department administered approximately 60-80 patient studies per month which included a full spectrum of procedures. The licensee received its material in unit dose form from a licensed radiopharmacy. The hospital retained the services of a consultant who performed quarterly audits of the radiation safety program (last Sept. 2016, with no findings).									
This inspection consisted of interviews with licensee personnel, a review of selected records, a tour of the nuclear medicine department, and independent measurements. All patient studies were completed at the time of the inspector's arrival therefore, the inspector could not observe any patient studies. The inspection included observations of surveys, security of byproduct material, use of personnel monitoring, and inventories of sources in storage.									
No violations of NRC requirements were identified during this inspection.
