## General Comment

As a member of the local fire department, I fully support the license request by WCS to store spent nuclear fuel. I am commenting as an individual and do not represent the department as a whole. Nuclear facilities are by far and away the best regulated in the United States. WCS has been great for the County and despite all the rhetoric by groups opposing them, there has been no transportation accident involving any waste headed to WCS. We have had more issues with radioactive sources from the oil industry. I believe WCS has a great safety culture and works closely with the County government to ensure the highest level of preparedness and safety for their operations. The increased traffic will pale in comparison to what occurs during an oil boom and our roads are already designed to handle such traffic. I see no downside to this project based on traffic, safety or environmental impact and the economic gains will be a huge boost to a local economy that is heavily dependent on oil. I fully support this project.
